Reference drawings

Two views of a ship at sea. This drawing shows the observation.

The edge of Earth’s dark shadow curves across the Moon.

A sphere is three-dimensional. The Sun, Earth and Moon are approximately spherical.

Evidence cards

Read the observations. Sort the cards as Strong or Weak on its own. Give a reason before checking.

Ship at the horizon

As a ship sails away, the hull disappears before the mast.

Shadow during a lunar eclipse

When Earth’s dark shadow crosses the Moon during a lunar eclipse, its visible edge is always curved.

Photographs from space

Spacecraft photographs taken from different viewpoints show a rounded Earth.

Travel all the way round

People have travelled all the way round Earth and returned to where they started.

You do · Aspire

Start in your book or in your usual response mode.

Choose the strongest clue and defend it against one alternative explanation. Then compare the bodies by diameter and name one limit of the ball model.

The Sun is about 109 Earths across. The Moon is about a quarter of Earth’s width. Consider size, distance or light.

Point, say, sign, draw, write or choose. You may pass.

Exit ticket · Aspire

Earth is 4 cm across in a scale drawing. About how wide is the Moon? Name one limit of the torch-and-ball model.

Point, say, sign, draw, write or choose. You may pass.

Pupil voice

What helped you most today, or what would you change next time?

Point, say, sign, draw, write or choose. You may pass.
