Reference A animal cells

Division makes more cells. Some descendants specialise as skin cells.

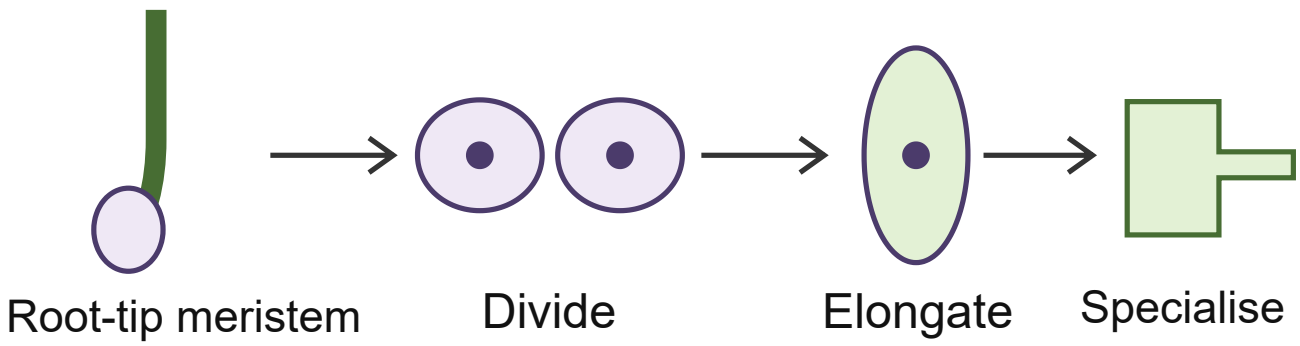

Reference only. Do not write on this sheet. Trace a feature, then explain its function.

Cell or source	Feature or range	Function or limit
Nerve cell	Long extension	Carries signals over a distance
Muscle cell	Structures that contract	Contraction produces force
Embryonic stem cell	Can give rise to many body-cell types	Not a promise of a successful treatment
Adult blood-forming stem cell	More limited range of blood-cell types	Makes replacement blood cells

The arrows show possible lineages. The drawing does not show every cell stage. Cells do not choose their own jobs. Specialised cells can share inherited DNA but use it differently.

Made by Matt

Reference B root growth

Root-tip meristem, division, elongation and differentiation in a simplified route.

Reference only. Do not write on this sheet.

Process or region	What it adds	Useful limit
Meristem	A region where cells divide	Not every root cell remains a meristem cell
Division	More cells	Number alone does not prove a specialised role
Elongation	Longer cells	Not the name for becoming specialised
Differentiation	Features suited to a job	Different cells can be at different stages

A root hair extension provides a large surface for absorption. The route is simplified. Use it to compare processes, not as a claim that every cell follows an identical sequence.

Made by Matt

Arrival and exit Supported

Use the labelled picture on Reference A for question 1. Respond in your usual mode.

1. Which label names the first cell in the drawing?

2. Cell division makes more cells or fewer cells?

3. What holds chromosomes in a eukaryotic animal cell: nucleus or cell membrane?

4. A root tip contains a meristem. Point to root tip or leaf middle as a place that makes new plant cells.

Exit ticket

1. Which process increases cell number?

2. A root is longer. What does that show?

Pupil voice

What helped you most today, or what would you change next time?

Point, speak, sign, draw, write or choose. You may pass.

verbal · written · drawn · signed · symbol / choice-selected · demonstrated / re-attempt · adult-scribed. You may pass.

Made by Matt

You do Supported

Use your book or this sheet. Use Reference A and B. One response per task.

1. Match division, elongation and differentiation to more cells, longer cells and a specialised job. [3]
Staff I ☐ S ☐ C ☐

Use Reference B and point to each change.

---

2. Compare damaged skin and a growing root. Name one shared process and one feature of the root route. [2]
Staff I ☐ S ☐ C ☐

Both make new cells. Find the place or length change in the root model.

---

3. A root is longer. Choose what the evidence supports: the root grew, or every root cell is a stem cell. Explain your choice. [2]
Staff I ☐ S ☐ C ☐

Length tells you about growth. Look for evidence of a cell type before naming it.

Feedback and response · Supported

Feedback codes

Code	Meaning
VF	Verbal feedback
WS	Worked with support
I	Independent
NS + …	Next step
E	Evidence captured
R	Pupil responded to feedback

My response

Record one response to feedback in your usual mode. You may pass.

Adult checks the response and ticks it, or writes R (Pupil responded to feedback).
