Staff answers

Year A | Autumn 2 · Week 2 | 9 November 2026

The starter comparison

Script B works because change FuelScore by 1 adds one point to the current total each time the event triggers. Script A uses set FuelScore to 1, which overwrites the variable with 1 every time and prevents the score from rising above 1.

Model for project card A

A space maze project

Pickup event script

When touching fuel pod: change FuelScore by 1.

Hazard event script

When touching laser wall: change HazardHits by 1 and go to the start pad. Keep set FuelScore to 0 and set HazardHits to 0 on the start event.

Model for project card B

A deep-sea maze project

Pickup event script

When touching pearl shell: change PearlScore by 1.

Hazard event script

When touching reef spike: change ReefHits by 1 and go to the start pad. Keep set PearlScore to 0 and set ReefHits to 0 on the start event.

Accept equivalent event structures that accurately detect contact with the pickup and hazard and increment the matching variable by 1 while preserving the start reset to zero.

Staff checks and next steps

Year A | Autumn 2 · Week 2 | 9 November 2026

Optional stretch event

Card A adds change FuelScore by 5 when touching the finish gate. Card B adds change PearlScore by 5 when touching the finish gate. Save this version as v2 while retaining v1.

Event and variable checks

Check that each touching check uses change rather than set, and that the pickup rule selects the pickup variable while the hazard rule selects the hazard variable. Note that touching a pickup may add more than 1 if the sprite stays on the item; Week 3 solves that fault.

Useful next-step prompts

Which variable should change when the player hits a hazard? Why did you choose change by 1 instead of set to 1? Does pressing start still reset both counters to zero?

Evidence decisions

Seen: the pupil demonstrates both event rules updating the matching variables and explains change versus set. Supported: record the action and actual prompt or scribing. Not yet seen: the action did not occur or the device was unavailable. Do not award an individual check from a partner’s file.

Save and revision

Both event scripts and the start reset must appear after reopening the saved file in W02_Events. If using v2, retain v1, open both and identify the finish bonus rule.
