Choose a rock for a job

Today I can… I can name one rock use. I can check one rock feature. I can say why the feature helps.

Staff answers

Starter and prior bindings

1. Mark and water-through tests: Autumn 2 Week 3. 2. By what they look or feel like: Autumn 2 Week 2. 3. Muscles: Autumn 1 Week 4. Autumn 1 means the prior half-term here. Check actual taught coverage before asking retrieval questions.

I do and We do

The slate is thin and can be made into a roofing slate. Learners may show by point, card or board. Sort in source order: Thin slate tile = Roof; Safe sample that leaves a mark = Marking; Small firm stone pieces = Path. Group choices stay Roof, Marking, Path. The missing job is based on the observed mark; do not fill it on pupil resources.

Step check

Check the rock feature is first and correct. Colour alone and a guessed name do not replace a check.

Four-choice hinge

Correct B, second: A path stone if it stays firm. This is a possible use supported by the observed clue, subject to more checks. It is not proof of real-path suitability.

Option	Diagnosis
A. A writing stick if it leaves a mark.	A mark was not observed in this test.
B. A path stone if it stays firm.	Uses the observed firmness for a possible job; more checks remain.
C. A sponge if it soaks up water.	Water uptake was not observed.
D. A window if it lets through light.	Light transmission was not observed.

The source class rule is about 3 in 4 right. For this pair hear both independent choices and reasons. Proceed when both are secure. Re-model an unsure learner’s step and ask the parallel hinge while the other continues. No auto-grade or response storage.

Staff answers · checks and limits

Parallel hinge

A different sample D splits into broad thin sheets. Which job could be checked next: a roof covering or a soft marking stick? A roof covering, after further checks.

Independent and Exit

Accept a match justified by an observed or safely tested feature. Supported matches a sample and job. Independent names the feature that helps. Aspire explains why a soft rock could fail on a busy path, tied to the needed feature rather than the rock name. Go deeper considers the needs of two jobs. Job switch tests the roof and marking reasons separately. Do not invent actual sample results.

Scientific and picture limits

The simplified picture and rock name cannot prove that a real sample meets every need of a job. Check actual suitable samples. A suitable slate can form a thin roof tile; suitable chalk can leave a mark. Picture colours do not show a test result.

Misconceptions

A named rock is good for every job: check the needed feature for each job. Colour tells whether a rock will mark: use a teacher-approved marking check on a small board, rather than guessing from colour.

Fading

Full model: This slate sample is thin. Slate can make a roof tile. I match it to a roof.

Shared model leaves the job blank after a sample makes a mark. Independent gives no filled answer. Next fade: show an unlabelled safe sample and job cards; the learner tests and gives a reason.

Prepared model and safety

This is optional model rehearsal, not a claimed core practical. Prepare clean blunt adult-checked rock samples, job cards and tray; a small board is for a teacher-approved marking check only. Inspect edges. Keep a stable tray. No forced touch, dust or tasting. Wash hands after. Staff confirm the local school risk assessment and exact kit. A picture or pointing route remains valid.

Staff guidance · access and handover

Adaptations

Cognition: use a three-step visual card for choosing a rock and job; remove the last cue after a correct try. Communication: point to real kit before a short spoken, signed or AAC response; wait for a turn. Regulation: give a private first–then cue and planned pause before the hinge, then re-enter with one step. Access: stable tray, large cards or accessible input, with no forced touch. Language: rehearse an Independent or Aspire idea in any language and retain the science challenge. EAL is language, not SEN. Use agreed speech-to-text, reading aloud or accessible reading on a staff device.

Adult roles and regulation

For the pair, one learner explains a match and one asks which checked feature helps, then they swap. Each keeps an individual response. At Independent agree actual adult roles and swap across the week. If one adult attends, follow that staffing plan. Agree a quiet supervised pause and give one short cue. Re-enter at the last completed step. Do not collect evidence while distressed. Handoff states deepest prompt, valid response mode and what the learner did independently.

Feedback and evidence

Use VF, WS, I, NS(+), E, R, // and ? only for what occurred. Record the hinge choice and named misconception, actual feedback code and prompt level separately. Review may include VF, a precise NS(+), a real edit // and requested read-back ?. R follows a response to the next step heard and judged by an adult next lesson; it is never automatic. E requires an observable curriculum action and is never collected during distress. No pupil data is stored in HTML.

In books retain the learner’s observation/result table or labelled explanation, review edit and Exit beside original work. A valid reasoned match does not require an invented experiment table. Use SCI-BUILD-A2-W04 for written, spoken, practical or photographic evidence on [SYS]. The adult hears Exit and uses it to choose the next model, prompt or starter.

If behind

Keep Choose a sample and show its use, safety and individual evidence. After a secure hinge shorten repeated oral rehearsal. If needed merge Exit reflection into Autumn 2 Week 5 Arrival; record the reason and coverage impact. Next weekly line: Group natural and human-made materials; record results in a table (ICT). Pass checked understanding and unresolved errors to the next starter. Do not replace individual work with a group product.

Staff guidance · invitations and records

Optional invitation bank · learner may pass

Route and invitation	Expected answer
Supported: Point to the slate card.	The slate sample or picture.
Supported: What does hard mean here?	Not easy to mark or change.
Independent: Why does the slate fit the roof example?	A suitable slate can form a thin roof tile.
Independent: What is a property?	A thing you can check.
Aspire: Can a sample suit one job but not another?	Yes. Jobs need different tested features.
Aspire: What does our picture leave out?	Whether this real sample meets all needs of the job.

Individual targets

Record the missing-job step for sequencing, attention or independence with prompt level. Record the hinge in the agreed mode for communication and turn-taking without requiring speech. Record private Arrival or pause/re-entry engagement, and accessible Independent input and target-related independence rather than diagnosis. Rehearse rock, hard, slate and property in the learner's language. Link E on [SYS] to the learner's own support, education, health, care and personal targets. Follow the individual behaviour/support plan where it differs.

Source evidence mapping and evaluation

Scheme evidence: [AWARD] [QUAL] introductory science route and [AWARD] [QUAL] science units. Formative: working-scientifically observations and results tables. Summative: end-of-unit assessment and qualification/unit evidence. Staff record date taught, delivered as planned, criteria met, adaptations and reasons, changes and coverage impact, and evidence banked.

Careers link: a roofer checks a tile before choosing it for a roof. Record actual pupil evidence with the current printed lesson id. The source record poster uses a legacy id order; do not create a second lesson id.
