# Staff answers · Supported

Arrival: unused lights off; yes; before is baseline; after.

Independent: preserve own action-to-mechanism chain, baseline, prediction where required, repeated measure, comparable condition and one limitation. Supported uses labelled cards and A/B choice; Independent full plan; Aspire compares both types and identifies confounding or evidence limit.

Exit: mitigation, with a cause-cutting reason.

Adult genuinely receives each response and names back the science without upgrading the pupil's wording. Only then choose secure / mixed / misconception / access / method or evidence and a named next move. Keep the pupil-owned next-question and measure card.

# Staff answers · Independent

Arrival: lower unused electricity demand can reduce fossil-fuel emissions; mitigation reduces causes, adaptation reduces harm; baseline; poster alone measures no impact.

Independent: preserve own action-to-mechanism chain, baseline, prediction where required, repeated measure, comparable condition and one limitation. Supported uses labelled cards and A/B choice; Independent full plan; Aspire compares both types and identifies confounding or evidence limit.

Exit: accept an accurate qualified action-to-mechanism chain.

Adult genuinely receives each response and names back the science without upgrading the pupil's wording. Only then choose secure / mixed / misconception / access / method or evidence and a named next move. Keep the pupil-owned next-question and measure card.

# Staff answers · Aspire

Arrival: accept accurate contrasting examples; energy demand to possible emissions where fossil fuels supply energy; same lamps/conditions/time rule; a local light-minute result does not measure a global climate effect.

Independent: preserve own action-to-mechanism chain, baseline, prediction where required, repeated measure, comparable condition and one limitation. Supported uses labelled cards and A/B choice; Independent full plan; Aspire compares both types and identifies confounding or evidence limit.

Exit: a named repeated measure, a valid limitation and no success claim before collecting evidence.

Adult genuinely receives each response and names back the science without upgrading the pupil's wording. Only then choose secure / mixed / misconception / access / method or evidence and a named next move. Keep the pupil-owned next-question and measure card.

# Staff answers · choices, lab and data

Starter: lights off is mitigation; safe shade is adaptation; poster without measures is not evidence of success. First ideas are held, not marked.

Hinge: first/repeat. Five days before and five days after, same method and comparable conditions. Poster and personal climate feeling do not check the intended measure.

Six-action sorter order: reduce / cope / reduce / cope / reduce / cope. Trees are classified by the named shade mechanism, not a general claim about all tree effects.

Lab order: lights mitigation; shade adaptation; before300 evidence/baseline; after90 evidence/after; poster evidence check with weak/no measurement. Use every source-specific retry clue.

Before 60+45+75+50+70=300; after15+20+10+25+20=90 empty-room light-on minutes. All are invented. Do not convert this into measured electricity, emissions, carbon or global climate success.

Glitch: second/repair. Retain useful local evidence and its limit; neither a global success claim nor erasing local evidence is justified.

# Staff guidance · scientific care and responsive teaching

Keep the conditional mechanism: where fossil fuels supply energy, lower demand can mean fewer emissions. Shade reduces heat harm rather than directly removing the cause. Repeated fair measures strengthen a limited claim but do not prove causation or a global climate outcome.

Use three paper scenarios derived from source actions: approved unused-lights routine, safe shade, water stored for dry spells. Supported chooses lights or shade. No live action is required. Never interrupt safety/access equipment; no family travel/food/energy data.

Next-move diagnoses: secure→transfer or fade a scaffold; mixed→contrast examples, hear reasoning and recheck each pupil; misconception→use the poster/no-measure counterexample and re-model; access→keep goal but change mode/load/format/adult role; method/evidence→keep first result, repair method and repeat.

Legacy identity reconciliation: source W11B/week11 maps to Autumn2Week4 through the Science lane. Visible handoff says Lessons9–10, historical data-mbm-cal and config say W12; pupil flow now says next lesson. The question/measure ownership is unchanged.
