Knowledge organiser · a scientific answer

I can make a claim that answers the question.

I can add relevant evidence and a scientific reason.

I can keep my first answer and make one pupil-owned improvement.

I can give a scientific answer with evidence and reasoning, then improve it after audience response.

A claim answers the question. Evidence is a useful result or model clue. A reason links that clue to a science idea.

Use claim, evidence and reason together. Keep the first answer. An adult says back what they heard or saw. Then choose a change, or say why you will keep the answer.

The practice rover distances are smooth 46, 44, 45 cm and fabric 18, 20, 19 cm. All three fabric runs are shorter. Friction is the model's science explanation. These practice data are not a new test.

A fair limit says what a result or model cannot show. More words alone do not make a stronger answer. Keep your own meaning when you improve it.
