Staff answers and checks

Starter: a claim needs an observation or result from a suitable model. Added greenhouse gas slows net heat loss and contributes to warming. A fair test keeps key conditions alike apart from the changed factor. Source locators are Autumn 2 Week 5, Autumn 2 Week 4 and Autumn 1 Week 5; check actual coverage.

Model: change rough/smooth surface, keep toy, start and launch the same, measure distance and repeat. The show-me answer is No, keep the toy the same. Diagram endpoint marks are examples, not results from this class.

We do: add a consistent launch control and name surface as the changed factor. Sort in source order: Change, Keep the same, Keep the same, Measure. A changed push can confound the surface comparison.

Step check: A, keep both results and check the method. Hinge: D, same start and push; change surface. A also changes start, B also changes trolley, C keeps the surface fixed and changes trolley and push. Hear each learner’s reason before moving on.

Staff answers · task, limits and next move

Parallel check: felt versus foil with a sliding block. Keep block and push the same; surface changes. Re-model for an unsure learner, then use this new case. Do not apply a class percentage to a pair.

Practical: predict with a reason. Use the same toy, start mark and launch method, measure two rough runs and two smooth runs in centimetres. Keep all actual results. The low clear track and stop-before-retrieval rule apply. No raised drops or mains kit. Do not invent measurements.

Supported identifies the changed factor with visual controls. Independent names two controls and records a result. Aspire explains why repeats help and names a method limit; when two runs differ, give a cautious conclusion and improve the next method. Different launch force or a shifting start can cause variation. Repeats reveal variation but do not remove bias by themselves.

Review controls and result labels, keep actual feedback and the learner’s own edit. Exit names change, control, result and next step. Week7 reviews and evidences autumn science. A quality tester repeats a controlled check before recommending a product change.

Staff guidance · pair, access and feedback

The pair works with a shared model and individual evidence. One explains and one asks for the clue, then they swap. Hear both independent reasons before moving on. Re-model an unsure learner's step and use a fresh parallel question while the other continues.

No cold calling or forced public reading. A learner may pass. Point, sign, speak, draw, type, write, direct an adult or use exact scribing. Read the task exactly when needed. Keep the science challenge and allow planning in any language. EAL is language, not SEN.

Use a stable tray or large cards and the agreed accessible input. Give processing time. Agree a quiet supervised pause and a brief first–then cue. Re-enter at the last completed step. Do not gather evidence while a learner is distressed.

Record actual VF, WS, I, NS(+), E, R, // and ? only when they occur. Keep deepest adult prompt separate from the pupil response. A real adult receives and names back the science. R requires the pupil's response to an NS(+) next step and real Audience; never award it for a click or completion. Keep the pupil's own wording and own-colour response.

Staff guidance · evidence and handover

Keep each first response, result or labelled explanation, the feedback and the pupil’s edit or justified decision to keep it. E requires an observable curriculum action on [SYS]. Use SCI-GROW-A2-W06 for written, spoken, practical or photographic evidence. Record prompt level, response mode, support faded and what was independent.

At Independent agree actual adult roles and swap across the week. If one adult attends, use the actual staffing plan. Follow individual support and behaviour plans. Record access, regulation and curriculum actions against the learner’s own targets without recording a diagnosis as evidence.

If behind, preserve Test two runs per surface or observe. Record distance. Name what changed, stayed the same and could limit the test. and the safety teaching. After a secure check shorten repeated oral rehearsal. Record any change, reason and coverage impact. Pass checked understanding, deepest prompt and unresolved errors to Week 7. Do not replace incomplete individual work with a group product.

Evaluation: date taught; delivered as planned; criteria met; actual adaptations and reasons; changes to the scheme and coverage; evidence banked. Source evidence mapping remains [AWARD] [QUAL]; no unit or qualification award is claimed by this lesson.
