Staff answers and checks

Starter: last week’s toy investigation changed surface and controlled toy, start and launch. Toy and surfaces can test a motion question. Gravity, air resistance or friction are acceptable prior forces. Check real taught coverage, not assumed attendance.

Model: a marked place turns out of torch light as the ball rotates. This models day and night. The globe and light are not to scale. The climate sketch is schematic, not measured data. Climate needs a long-term pattern, not one weather report.

Sort in source order: toy and surface; torch and ball; long-term cards. Fill the missing marked-place clue and choose a real distance observation for the toy claim. A force explanation needs a suitable repeated comparison with controls.

Step check: A, the marked place turns away from torch light. Hinge: A, sled and two marked surfaces. B is a day/night model; C is a melting-ice model; D is one weather report. All learners choose privately before group discussion. Check each learner’s reason; do not apply the old three-in-four threshold.

Staff answers · task, limits and next move

Parallel check: a new place on a globe turns into shade. Use a globe and fixed lamp, not sled and mat. With five learners use a pair and a trio. Re-model a shared error or support an unsure learner while secure learners choose a fresh question.

Independent: choose two questions from forces, space or climate and connect each to a matching model and clue. Supported may complete one question at a time with access support, then attempt the second. Independent explains the link. Aspire states a model limit, suggests another check, and compares two limits without claiming either model answers everything.

Formal evidence: staff decide and record conditions before the task. Use only agreed support, collect the individual first response, then give feedback under those conditions. Practice, shared rehearsal and adult prompting remain separate from individual evidence. No new unit, criterion, level or award is asserted.

Review and exit: keep the original, genuine source locator, actual response and learner’s change. Hear the science from each learner. Where evidence is absent, record not found yet and plan a locating check. Hand checked questions, limits and support to the next lesson, then Spring 1 Week 1.

Staff guidance · group, access and feedback

GROW: up to five learners. Use a pair and a trio for five, two pairs for four, a trio for three, or a pair for two. In a pair, one explains and one asks for the clue; swap. In a trio, the third checks the source, then rotate all roles. Each learner first chooses privately and keeps their own record. Hear every learner at the hinge. Re-model a shared error, or support an unsure learner while secure learners try a fresh check. Never use a percentage rule.

No cold calling or forced public reading. A learner may pass. Point, sign, speak, draw, type, write, direct an adult or use exact scribing. Read the task exactly when needed. Keep the science challenge and allow planning in any language. EAL is language, not SEN.

Use a stable tray or large cards and the agreed accessible input. Give processing time. Agree a quiet supervised pause and a brief first–then cue. Re-enter at the last completed step. Do not gather evidence while a learner is distressed.

Record actual VF, WS, I, NS(+), E, R, // and ? only when they occur. Keep deepest adult prompt separate from the pupil response. A real adult receives and names back the science. R requires the pupil’s response to an NS(+) next step and real Audience; never award it for a click or completion. Keep the pupil’s own wording and own-colour response.

Staff guidance · evidence and handover

Keep each first response, result or labelled explanation, the feedback and the pupil’s edit or justified decision to keep it. E requires an observable curriculum action on [SYS]. Use SCI-GROW-A2-W07 for written, spoken, practical or photographic evidence. Record prompt level, response mode, support faded and what was independent.

At Independent agree actual adult roles and swap across the week. If one adult attends, use the actual staffing plan. Follow individual support and behaviour plans. Record access, regulation and curriculum actions against the learner’s own targets without recording a diagnosis as evidence.

If behind, preserve Choose two science questions from forces, space or climate. Show an answer with a model and a matching clue. Use only your agreed support if this is formal evidence. and the safety teaching. After a secure check shorten repeated oral rehearsal. Record any change, reason and coverage impact. Pass checked understanding, deepest prompt and unresolved errors to Spring 1 Week 1. Do not replace incomplete individual work with a group product.

Evaluation: date taught; delivered as planned; criteria met; actual adaptations and reasons; changes to the scheme and coverage; evidence banked. Source evidence mapping remains [AWARD] [QUAL]; no unit or qualification award is claimed by this lesson.
