Staff answers and checks

Arrival: accept a genuine Week 7 first-lesson map, the delivered S2 record, or authentic earlier autumn work. The original W7A companion was inspected as context only. Keep the actual locator and missing-record status; do not reconstruct earlier learning or an absent file.

Starter: B links arrow direction to energy transfer. A names a visible feature without explaining the link. Preserve every first response and hear each learner's reason. The neutral FC-2 example is a current teaching model, not a personal result or recovered evidence.

I do and FC-2: arrows from grass to rabbit to fox show the direction of energy transfer in that model. They do not show the amount transferred, all feeding links or every fox's diet. The source locator must let another reader find the exact feature.

Limit finder: globe/lamp is simplified and not to scale; three repeats on two surfaces show a pattern rather than a universal law; a smooth ball omits terrain and slight flattening; schematic climate figures omit real variation. These are source examples. Do not imply the learners measured them.

Staff answers · task, limits and next move

Revision moves: clear adds a missing locator, label or term; fair narrows an overclaim or restores a limit; wider connects a second genuine record. All are valid when justified. The all-foxes claim needs make fair. Keep original, actual response and the learner's own revised meaning.

Group decision: up to five learners, pair plus trio if five. Each makes a private first choice; in the trio rotate explainer, clue-checker and source-finder. Ask every learner for the link and limit. Re-model a shared misconception; otherwise give targeted support while secure learners check a second genuine record. No majority threshold.

Independent: Supported uses one genuine item with frame and private feedback; Independent uses two evidence links, one limit and saved change; Aspire evaluates two accounts or items and transfers the reasoning to a new question. All keep claim, locator, evidence, reason, limit, actual response and attributable change. Missing evidence is not a reason to invent a result.

Feedback is teaching guidance, not an assessment decision. No backdating, staged event, invented quote, adult-authored learner response or new assessment claim. If formal conditions apply, record them before collection; only the authorised centre role decides assessment. Exit receives the learner's link, limit and saved change and names the next action and report-back.

Staff guidance · group, access and feedback

GROW: up to five learners. Use a pair and a trio for five, two pairs for four, a trio for three, or a pair for two. In a pair, one explains and one asks for the clue; swap. In a trio, the third checks the source, then rotate all roles. Each learner first chooses privately and keeps their own record. Hear every learner at the hinge. Re-model a shared error, or support an unsure learner while secure learners try a fresh check. Never use a percentage rule.

No cold calling or forced public reading. A learner may pass. Point, sign, speak, draw, type, write, direct an adult or use exact scribing. Read the task exactly when needed. Keep the science challenge and allow planning in any language. EAL is language, not SEN.

Use a stable tray or large cards and the agreed accessible input. Give processing time. Agree a quiet supervised pause and a brief first–then cue. Re-enter at the last completed step. Do not gather evidence while a learner is distressed.

Record actual VF, WS, I, NS(+), E, R, // and ? only when they occur. Keep deepest adult prompt separate from the pupil response. A real adult receives and names back the science. R requires the pupil’s response to an NS(+) next step and real Audience; never award it for a click or completion. Keep the pupil’s own wording and own-colour response.

Staff guidance · evidence and handover

Keep each first response, result or labelled explanation, the feedback and the pupil's edit or justified decision to keep it. E requires an observable curriculum action on [SYS]. Use SCI-GROW-A2-W07-P2 for written, spoken, practical or photographic evidence. Record prompt level, response mode, support faded and what was independent.

At Independent agree actual adult roles and swap across the week. If one adult attends, use the actual staffing plan. Follow individual support and behaviour plans. Record access, regulation and curriculum actions against the learner's own targets without recording a diagnosis as evidence.

If behind, preserve each learner's claim, genuine locator, clue, reason, limit, actual response and saved change and the safety teaching. After a secure check shorten repeated oral rehearsal. Record any change, reason and coverage impact. Pass checked understanding, deepest prompt and unresolved errors to Spring 1 Week 1. Do not replace incomplete individual work with a group product.

Evaluation: date taught; delivered as planned; criteria met; actual adaptations and reasons; changes to the scheme and coverage; evidence banked. Source evidence mapping remains [AWARD] [QUAL]; no unit or qualification award is claimed by this lesson.
