The aim

I can use cell references in formulas and check that totals update.

Cell references

B4 means column B, row 4. References link the formula to the input cells.

Formula signs

= starts a formula. * multiplies. SUM adds a range. D4:D6 means D4, D5 and D6.

Check carefully

Check the formula as well as the displayed answer. A typed result does not update. Check any blank input before trusting the total.

My success checks

[ ] I used cell references in my formulas.
[ ] I checked the row results and whole total.
[ ] I changed an input and checked the new total.
[ ] I saved and reopened my own workbook.

Where this leads

Office and stock roles use spreadsheets to check quantities. Explaining a formula gives evidence of a digital skill for an application.
