Titles and text

Accept three clear, distinct titles such as Our activity kit, Activity kit points and One change that helps. Use dark text on a plain light background, readable size and short text. For this practice body text is at least 28, checked on the actual display.

Model description

Paper packs use 12 points, card packs 10 and fastener packs 8. The adult copy and pupil chart use the same checked facts.

Pupil chart description

Example: Paper packs use 12 points, card packs 10 and fastener packs 8. Paper uses the most points. Accept a concise equivalent that preserves the meaning. The visible comparison may also state that paper exceeds card by 2.

Reading order

Title, chart with its description, then comparison. Verify the software order, not only visual placement. The starting slide 2 deliberately stores the image first.

Hinge and parallel check

chart.png is just a file name, not a description. Choose the blue bar does not work without a label or another cue. Name the item and value.

Exit

Give a specific title and item/value labels. A useful description also helps. Changing red to another colour alone does not solve the missing meaning.

Checks and feedback

Reason examples

I made the text larger and darker so it is easier to read. I described the chart so its key information is available without seeing the image. I put the title first so the slide is introduced before the detail.

Aspire

A concise description should include the important values or comparison. Use visible labels as well as colour. The chart cannot tell us preference, prices or pack counts. No single font size, contrast choice or checker guarantees access for everyone.

File inspection

Check three slides and no accidental extra copies. Inspect alternative text and reading order in the software. Preview the full deck and reopen the saved file. If controls are unavailable, log the remaining check without inventing success.

If an image is replaced

Keep the factual data unchanged. Recheck its description and order after replacement. A visible summary is helpful but does not prove that the image description field was set.

One next step

Choose one repair: clearer title; readable text; useful description; corrected order; a specific reason. Wait for the pupil response and acknowledge it privately.

Evidence boundary

An adult edit, a supplied model or a good spoken explanation does not prove independent digital editing. Record pupil choices, access support, prompts and corrections separately.
