Explore — Light and colour in festival art

Today I can… ☐ find warm and cool colours. ☐ compare bright marks on different grounds. ☐ link a colour or pattern choice to its effect.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R ☐ [//] ☐ [?] _____

STAFF ANSWERS · Arrival

Supported

1. Warm colour: Orange. Orange is a warm colour; blue is a cool colour. (A's ground is very dark blue; its marks are yellow and orange.)
2. Cool colour: Cool colours.
3. Ground: Dark; very dark blue.
4. Repeat: A dot; the ring/dot pair repeats three times.

Use one tier. Keep these answers out of pupil view until after the first response.

STAFF ANSWERS · Arrival

Standard

1. Colour change: A's marks are warm yellow and orange; B's are cool light blue and light green. The ground and arrangement stay the same.
2. Contrast: A. The bright yellow rings have greater light-dark contrast against the dark ground than against C's pale yellow ground.
3. Pattern: Yellow ring, then orange dot, repeated three times.
4. Colour word: No. Cool describes a colour group in art; it does not tell the paper's temperature.

Use one tier. Keep these answers out of pupil view until after the first response.

STAFF ANSWERS · Arrival

Stretch

1. Comparison: The marks change from warm yellow/orange to cool blue/green. The ground, ring/dot order, number, size and spacing stay the same. Accept any one accurate constant.

2. Separate choices: Yes. B's light, bright marks contrast with its dark ground. Warm/cool grouping and light-dark contrast describe different features.

3. Testing an idea: Only the ground changes; the same yellow/orange marks and arrangement appear on dark blue and pale yellow. This allows comparison of the yellow rings' visibility against each ground.

4. Two views: Yes. For example, repeated spacing may seem calm to one viewer or lively to another. Require a visible feature to support the view; neither effect is compulsory.

Use one tier. Keep these answers out of pupil view until after the first response.

Supported

1. My colours: Warm for red, orange or yellow; cool for blue or green. Check against the pupil's own plan or test.
2. Dark or pale: Dark. Bright marks have more contrast with a dark ground.
3. Repeat: Any correctly located planned or tested repeat. Record the actual marks indicated.

Use one tier. Keep these answers out of pupil view until after the first response.

STAFF ANSWERS · Exit ticket

Standard

1. Colour groups: Warm: yellow or orange; cool: blue or green. Red is also accepted from the colour cards.

2. Contrast: A clear light-dark difference creates contrast between the mark and the ground.

3. Effect: A relevant feature-to-effect link grounded in the pupil's plan or test; accept different plausible interpretations.

Use one tier. Keep these answers out of pupil view until after the first response.

Stretch

1. Controlled change: Any specific feasible colour change with an accurate constant, such as cool marks replacing warm marks while the ring/dot order stays the same.

2. Evidence: Locate the same repeated shape sequence in each, rather than only say the patterns “feel the same”.

3. Two fair views: Both can be fair if each view points to a visible feature, such as even spacing for calm or bright contrast for lively; no effect is universal. Do not require any personal history or belief.

Use one tier. Keep these answers out of pupil view until after the first response.

STAFF ANSWERS · teaching and routes

Starter: 2. Colour and pattern choices can vary. 1 is an unsupported generalisation; 3 is contradicted by image B's bright cool marks on a dark ground. Accept a reason based on the examples without asking about personal celebrations.

I do: Its ground changed. The marks keep the same shape, colour, size, order and spacing. Pupils may match the marks in the two examples.

We do: Same ground and ring/dot repeat; change = colour group. The adult models finding a shared feature, then pupils choose the change before the blank is filled.

We do: 1 Different ground: A is dark blue; C is pale yellow. 2 Same shape order: ring/dot repeated three times. 3 Any appropriate colour choice with a feature-based reason. For example, bright blue and green could give a cool effect while standing out on dark paper. Warm colours need not seem lively to everyone; cool colours need not seem calm.

You do · Independent: A/B share dark ground and the ring/dot arrangement; their marks change from warm to cool colours. A's yellow rings contrast more clearly with the ground than C's. Accept a specified colour and shape plan with an attempted test or directed arrangement, plus two accurately used art words linked to visible features. The test may use the prepared labelled cards. Do not reward an unsupported effect word alone.

You do · Supported: 1 Warm; 2 cool; 3 A. A valid plan selects colours and a repeat, then locates their contrast with a dark ground, communicated in any mode. Record scaffold use.

You do · Choice: A/B: same dark ground and shape order, different colour group. A/C: same marks and arrangement, different ground; A's yellow rings are clearer. Accept one correct constant, one correct change and a reason linking bright marks to their dark ground. The plan has an identifiable repeat. The mode is a choice; an unsupported example letter is not sufficient.

STAFF ANSWERS · teaching and routes

You do · Aspire: A specified mark-colour change with the requested features retained, an accurate comparison and an art reason. For example, replacing yellow/orange with bright light blue/green changes warm to cool while keeping light-dark contrast and the ring/dot repeat. The pupil acknowledges that viewers can respond differently. A plan that changes other features needs revision to meet this particular task; it is not artistically wrong.

Staff: mark I, S or C beside the You do response for actual independence, support or choice.
