A review with evidence

Today I can… ☐ describe a feature I can check. ☐ explain and qualify my judgement. ☐ recommend a work to an audience, with a reason.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R ☐ [//] ☐ [?] _____

STAFF ANSWERS · Arrival

Supported

1. A feature: Orange.
2. A line: Straight; the strips run diagonally.
3. Evidence or opinion: Three bands, in Flow. 'The best art' is a judgement.
4. A listener: People viewing the art.

Use one tier. Keep these answers out of pupil view until after the first response.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R ☐ [//] ☐ [?] _____

STAFF ANSWERS · Arrival

Standard

1. A feature: For example, a small orange circle above the curved bands towards the upper right. Accept another accurate, specific feature.

2. A comparison: Flow has curved bands; Crossing has straight diagonal strips. A difference must refer to both works.

3. Evidence or opinion: The cropped circle in Crossing can be checked at the right edge. Exciting is an interpretation or judgement that needs a reason.

4. A listener: To explain who might value the work and why, instead of assuming everyone will respond alike.

Use one tier. Keep these answers out of pupil view until after the first response.

STAFF ANSWERS · Arrival

Stretch

1. A feature: For example, the orange circle contrasts with the blue bands, so it could draw attention. Accept a different plausible effect supported by an accurate feature.

2. A comparison: Curved bands may suggest flow or a gentle movement; crossing diagonals may suggest tension or a strong structure. Require a feature from each work; interpretations may differ.

3. A limit: No. The shapes may support a viewer's interpretation of tension, but do not prove the maker's emotional state or intention. A reliable account from the maker could add relevant context.

4. A listener: It assumes universal taste and gives no reason. Name a relevant audience and connect the recommendation to a feature or experience.

Use one tier. Keep these answers out of pupil view until after the first response.

Supported

1. Feature: Accept any accurately located feature in the chosen work, consistent with the review.
2. Judgement: A possible effect or interpretation; it is not a colour. It needs a feature as support.
3. Audience: Accept a fitting audience and feature-based reason, such as abstract-image viewers comparing its shapes. No single audience is compulsory if the reasoning fits.

Use one tier. Keep these answers out of pupil view until after the first response.

STAFF ANSWERS · Exit ticket

Standard

1. Evidence: Require an accurate feature and a clear link to the judgement, in any response mode.
2. Qualification: Accept a plausible alternative or real scope limit, such as reviewing only one image and not knowing the maker's intention. Do not require an invented negative comment.
3. Audience: A specific audience linked to an artistic feature or experience. Unsupported 'everyone' is insufficient without qualification.

Use one tier. Keep these answers out of pupil view until after the first response.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R ☐ [//] ☐ [?] _____

STAFF ANSWERS · Exit ticket

Stretch

1. Evidence: The named feature can be located and its link to a judgement discussed; 'good' alone gives neither evidence nor a criterion.

2. Qualification: A supported interpretation does not establish intention. Reliable contextual evidence would be needed; even then the review should distinguish the source from the viewer's judgement.

3. Audience: Accept a fair limit linked to the viewer's interest, for example that someone seeking realistic portraits may find less of that here while still valuing the colour or form. Do not assume a whole group's taste.

Use one tier. Keep these answers out of pupil view until after the first response.

STAFF ANSWERS · teaching and routes

Starter: B names the circle and bands and links their contrasting colours to the reviewer's attention. A is a possible opinion, but it supplies no evidence and assumes that all viewers agree. A confident voice alone does not strengthen evidence.

We do: Feature. The pale gaps can be located directly. Model one check against the image, then return the next choice to pupils.

We do: 1 Feature; 2 Interpretation; 3 Recommendation, supported by a feature; 4 Unsupported claim. A valid repair is 'Crossing feels tense to me because the dark strips cross in different directions.' A pupil may prefer 'structured' or another interpretation with visible support. Do not judge pupils' taste or demand agreement.

You do · Independent: Look for two accurate features, a supported judgement, a plausible qualification and an audience reason. For example, a review of Crossing may link its overlapping diagonal strips and cropped circle to movement, acknowledge that another viewer sees a stable structure, and recommend it to viewers interested in abstract composition. An equally supported different judgement is valid. Do not accept a definite claim about the maker's mental state without evidence. Record the pupil's checked meaning, not copied model wording.

You do · Supported: Flow's fitting cues are curved bands and small orange circle; Crossing's are overlapping diagonal strips and cropped white circle. Effects have no fixed answer: require a plausible link to the selected visible detail. Abstract-image viewers are a directly justified audience for these examples; another recommendation may be accepted if the pupil explains the fit or limitation honestly. 'Another viewer might see the straight strips as a strong structure' is one valid qualification. The pupil retains ownership of the review when assisted with recording.

You do · Choice: Curved blue bands match Flow; overlapping dark diagonal strips match Crossing. Accept a reasoned effect rather than prescribing taste. 'This is my reading' correctly qualifies the interpretation. An audience choice needs a reason: these works offer abstract forms rather than a lifelike portrait. A card choice alone is not a complete review; invite the feature-to-effect link and audience reason in any mode, with the option to pass. Keep the original choice and note any adult scaffold.

Today I can… □ describe a feature I can check. □ explain and qualify my judgement. □ recommend a work to an audience, with a reason.

Feedback: □ VF □ WS □ I □ NS □ E □ R □ [//] □ [?] _____

STAFF ANSWERS · teaching and routes

You do · Aspire: Accept an evidence-led comparison, not a prescribed favourite. A strong response could compare the repeated curves and pale spaces in Flow with Crossing's overlapping diagonals, evaluate movement versus structure as readings of Crossing, and explain that a larger image or reliable context from the maker might alter its judgement. The recommendation must explain audience fit. Require a fair account of the competing view; inventing a fault or claiming universal taste does not meet the aim. A signed, annotated or scribed review can show the same reasoning.

Staff: mark I, S or C beside the You do response for actual independence, support or choice.
