Map symbols and grid references

Today I can… ☐ identify features using the key. ☐ give a four-figure grid reference and direction. ☐ explain what a reference shows and what it leaves out.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R ☐ [//] ☐ [?] _____

Knowledge organiser

I can use a map key and grid references to locate features.

Identify

The key says B means library.

Check the key of the map being used; never assume the same symbol has the same meaning on every map.

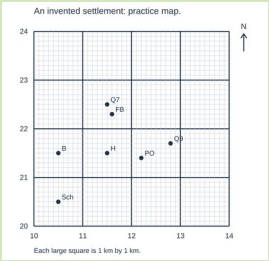

Locate

Find the library's square.

Its left grid line is 10.

The bottom grid line of that square is 21.

Put them together: 1021.

The school is in the leftmost column and lowest row. The library is directly north of it in the next row. The hall is directly east of the library. The park point, labelled Q7, is directly north of the hall. The footbridge shares the park's square. The post office, labelled PO, and health centre, labelled Q9, share the square east of the hall.

An invented settlement: practice map. · 10 · 11 · 12 · 13 · 14 · 20 · 21 · 22 · 23 · 24 · N · Each large square is 1 km by 1 km. · Sch · B · H · Q7 · FB · PO · Q9

Check precision

1021 identifies the whole square, not just the library dot.

For a six-figure reference, split each side into ten equal parts.

So its six-figure reference is 105215: all three easting digits, then all three northing digits.

Each tenth is 100 m on this 1 km practice grid. A six-figure reference locates a 100 m grid square, more precisely than a four-figure reference; it is not an infinitely exact coordinate.

Today I can… ☐ I can identify features using the key. ☐ I can give a four-figure grid reference and direction. ☐ I can explain what a reference shows and what it leaves out.
