_____

Arrival

Supported

1.

Where does a rabbit get its food: eating grass or making it?

2.

Name one plant in a food chain.

3.

Link to today: Name one job food does in a body.

4.

Do muscles pull or push bones?

_____

Exit ticket

Supported

1.

Point to the producer in grass → rabbit → fox.

2.

Explain what one arrow means.

3.

Why do our chains start with a plant? Say why. Give one limit of the model.

_____

Starter and method strip

In your book: Write one short answer to today's opening question.

A plant and rabbit both need energy. Which can make its own food?

A. The green plant.

B. The rabbit.

C. Both animals and plants make their own food.

1.

Set out just the plant and animal cards and paper arrows. Do not touch or feed real plants or animals.

2.

Match each animal to its food. Ask the adult to check your cards. STOP AND CHECK with the adult. Then go on.

3.

Make both chains from the cards you have. Point each arrow from the food to its eater.

4.

Fix the arrow that points the wrong way. Then cover one plant card.

5.

Write one food link you saw. Say what might change if there were fewer plants. Give one limit of this model.

_____

Starter and method strip · continued

Kit: Plant and animal cards, paper arrows and a paper cover. You may use toy models too.

Do not pick up, touch or feed real plants or animals. Do not use gory examples. Do not talk about what you or other pupils eat.

Use the chain desk. Or tell an adult how to move the same paper cards.

You can point, sign, speak, draw or write. Or tell an adult what to do. Keep your own choices and exact words.

Put out just the kit for this stage. If you cannot take part safely, watch the teacher show it. In your book, write what you saw. Say what you can tell from it.

After the task, write what you saw. Say what it tells you about today's goal. Add the steps or a diagram only if they are part of the task.

_____

Choice

Match each animal to its food. For rabbit, choose grass / stone. For fox, choose rabbit / leaves. For caterpillar, choose leaves / stone. For robin, choose caterpillar / leaves. Use two sets of cards. Make the first chain. Put fox, grass, rabbit in the right order. Make the next chain. Put robin, leaves, caterpillar in the right order. Which ones are the producers? Choose plants / animals. Fix the arrow that points the wrong way. Choose food to eater / eater to food. Think of fewer plants. Who might have less food? Choose only plant-eaters / animals farther along too. Give one reason. What is one limit of the chain? Choose selected links / exact animal numbers. Record C beside your book response.

_____

Knowledge organiser

I can explain that animals get food by eating, and plants can make their own food.

Words for this lesson

producer: here, a green plant. It uses light to make its own food

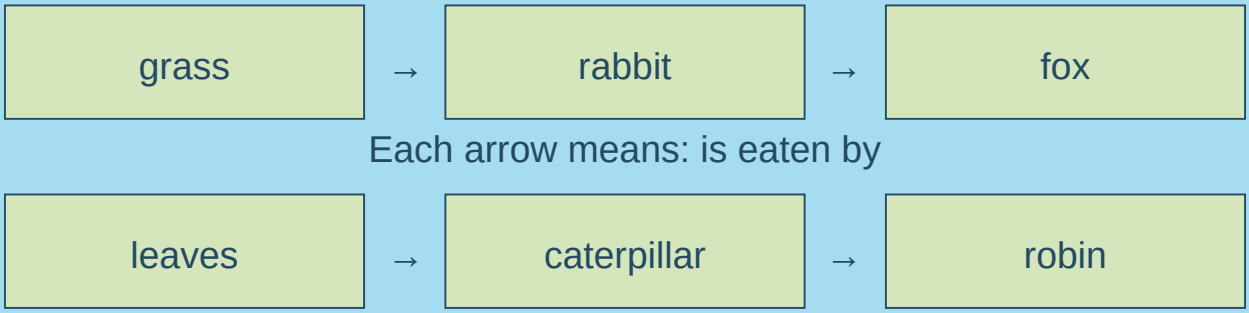

consumer: an animal. It eats to get its food

food chain: a model. It shows what eats what

energy: what passes from food to its eater along the chain

Food passes from grass to rabbit to fox, and from leaves to caterpillar to robin

Green boxes show the plants and animals in the chain.

Follow these ideas

A green plant is a producer: it makes food using light. An animal is a consumer: it eats to obtain food.

Read grass → rabbit → fox: grass is eaten by the rabbit; the rabbit can be eaten by the fox.

Read leaves → caterpillar → robin in the same way. The arrow points from food to its eater.

Discover: Animals get food by eating

Today I can… ☐ I can say that plants make their own food. ☐ I can say that animals must eat to get theirs. ☐ I can put a simple food chain in the right order.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R ☐ [//] ☐ [?]

_____

Knowledge organiser · continued

Keep the claim careful

A simple chain shows some food links. It is not a full food web. It cannot tell us the exact number of animals.

Show it

I can say that plants make their own food.

I can say that animals must eat to get theirs.

I can put a simple food chain in the right order.

_____

Cards

Cut out the organism cards and arrows. Place them on the desk; record the chain in your book.

Rabbits can eat grass; foxes can eat rabbits.

Caterpillars can eat leaves; robins can eat caterpillars.

Cows can eat grass; owls can eat small animals. These are examples, not complete diets.

A model shows selected links, not the whole food web.

grass	rabbit	fox
leaves	caterpillar	robin
cow	owl	small animal
producer	consumer	is eaten by →
is eaten by →	is eaten by →	is eaten by →

_____

Cards · feeding clues

GRASS → RABBIT → FOX

LEAVES → CATERPILLAR → ROBIN

REPAIR THE CLAIM

ANOTHER FEEDING LINK

Rabbit clue

Rabbits can eat grass; foxes can eat rabbits.

Robin clue

Caterpillars can eat leaves; robins can eat caterpillars.

Wrong arrow

Fox → rabbit → grass is offered for the supplied feeding clues.

Food claim

Animals make their own food like green plants.

Cow food clue

A cow can eat grass. Use this as one animal-food pair.

Owl food clue

An owl can eat a small animal. Use this as one animal-food pair.
