Discover: Animals get food by eating

Today I can… ☐ I can say that plants make their own food. ☐ I can say that animals must eat to get theirs. ☐ I can put a simple food chain in the right order.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R ☐ [//] ☐ [?] _____

STAFF ANSWERS · Supported

Arrival

1. Eating grass.
2. For example, grass.
3. Food gives us the energy and parts we need to grow.
4. Pull.

Exit

1. 1. Grass.
2. 2. Food and energy pass from the food to its eater.
3. 3. The plant uses light to make food. The chain shows some food links. It cannot tell us the exact number of animals.

STAFF ANSWERS · reasoning

A plant uses light to make food. Animals eat to get food.

A simple model shows what may change. Other food links can matter. An animal may have more than one food.

Food passes from grass to rabbit to fox.

Food passes from leaves to caterpillar to robin.

Repair to grass → rabbit → fox. Read each arrow as is eaten by.

Animals obtain food by eating. Green plants can make their own food using light.

Cow → eats grass: the animal obtains food by eating. In a chain, grass points towards the cow.

The owl obtains food by eating a small animal; this is an example, not every owl’s complete diet.

Exit: grass is the producer. The arrow means is eaten by; food/energy passes to the eater. Both chains begin with a green plant that makes food using light. Animals obtain food by eating. Fewer plants may affect consumers indirectly; other feeding links mean exact numbers cannot be inferred.

The leaves are part of the green producer plant, not a separate species. Green plants in these examples make food using light; roots take in water and minerals, not ready-made food. Sunlight supplies energy but is not an edible organism. Producer does not mean every producer must be a plant. Animals obtaining food here is a biological idea, not a claim about human cooking. A paper cover supports a qualified prediction, not ecological measurements. A photograph alone does not establish understanding, and no photography or public sharing is required.

STAFF ANSWERS · We do · evidence desk

Rabbit clue: Food passes from grass to rabbit to fox.

Retry: Start with the food and point to its eater.

Robin clue: Food passes from leaves to caterpillar to robin.

Retry: The leaf is food for the caterpillar.

Wrong arrow: Repair to grass → rabbit → fox. Read each arrow as is eaten by.

Retry: The clue says the fox can eat the rabbit.

Food claim: Animals obtain food by eating. Green plants can make their own food using light.

Retry: Look again at producer and consumer.

Cow food clue: Cow → eats grass: the animal obtains food by eating. In a chain, grass points towards the cow.

Retry: Read the clue: the grass is the food.

Owl food clue: The owl obtains food by eating a small animal; this is an example, not every owl's complete diet.

Retry: Keep animal and its food linked by the supplied clue.
