_____

Knowledge organiser

I can explain that animals get food by eating, and plants can make their own food.

Words for this lesson

producer: here, a green plant. It uses light to make its own food

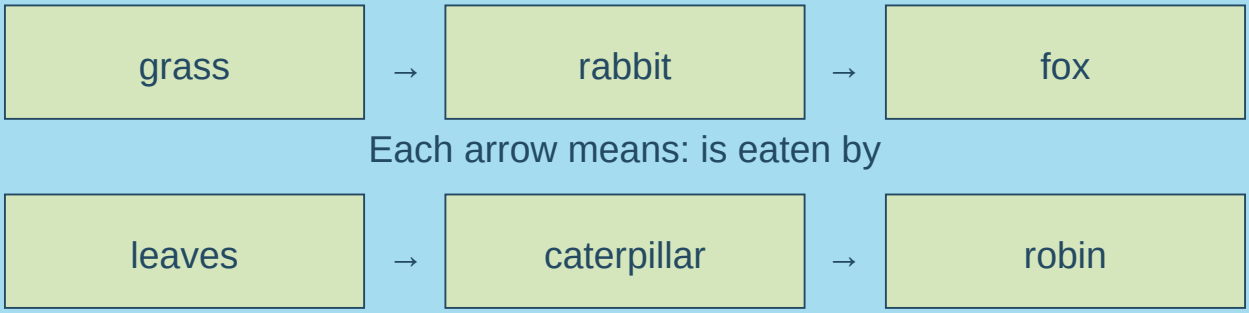

consumer: an animal. It eats to get its food

food chain: a model. It shows what eats what

energy: what passes from food to its eater along the chain

Food passes from grass to rabbit to fox, and from leaves to caterpillar to robin

Green boxes show the plants and animals in the chain.

Follow these ideas

A green plant is a producer: it makes food using light. An animal is a consumer: it eats to obtain food.

Read grass → rabbit → fox: grass is eaten by the rabbit; the rabbit can be eaten by the fox.

Read leaves → caterpillar → robin in the same way. The arrow points from food to its eater.

Keep the claim careful

A simple chain shows some food links. It is not a full food web. It cannot tell us the exact number of animals.

Show it

I can say that plants make their own food.

I can say that animals must eat to get theirs.

I can put a simple food chain in the right order.
