Discover: Animals get food by eating

Today I can… ☐ I can say that plants make their own food. ☐ I can say that animals must eat to get theirs. ☐ I can put a simple food chain in the right order.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R ☐ [//] ☐ [?] _____

TA brief

Prompt ladder for adults

1. Point to the relevant place / instruction.
2. Ask one short question: "What is it asking you to find?"
3. Rephrase the instruction in simpler language.
4. Provide a scaffold or limited choice.
5. Model the first step only, then return the task to the pupil.

Access and independence

No cold calling; nobody is asked to read difficult text aloud.

A pupil who missed last lesson: give the Arrival reminders and today's must-know words, not the missed lesson's work.

Tell the teacher the barrier: reading, vocabulary, processing, regulation, writing or a science misconception. Avoid prompting through every question or dictating the final answer.

Beside the You do, mark I (independent), S (supported) or C (choice): the level of independence, not the effort.

00–03 · Arrival · 3 min

Use Arrival reminders if the pupil missed the last lesson. Four brief answers in the book; accept pointing, drawing or exact-word scribing.

03–06 · Starter · 3 min

Every pupil commits by point, speech, sign or book before a reveal. Starter answer: The green plant; it makes food using light. The rabbit gets food by eating.

06–10 · I do · follow the evidence · 4 min

Think aloud one step at a time. Pause so pupils name the evidence, not a guess.

10–14 · We do · everyone answers · 4 min

Correct: A plant uses light to make food. Animals eat to get food. If fewer than three in four show the idea, model another example before the independent route.

TA brief · continued

14–17 · I do · check the claim · 3 min

Name the limit explicitly. Do not let model data become a performed practical.

17–21 · We do · evidence desk · 4 min

Hear the reason before checking. All cards, feedback and retry explanations are available. Keep supplied model records distinct from actual observations.

21–23 · Check · repair the idea · 2 min

Use an incorrect idea as a question only; receive a response then show the repair.

23–25 · You do · prepare safely · 2 min

Confirm local setup and safe route. Read safety before any handling. The card/director route has the same reasoning demand.

25–33 · You do · make your evidence · 8 min

One adult supports pupils needing the Supported route; the other holds the group. Swap deployment across the week. Scaffold only the step that is blocked.

33–36 · Review and improve · 3 min

Give private VF and one precise NS+. Keep pupil ownership; record R only after response to a real next step and genuine adult Audience.

36–40 · Exit ticket · 4 min

Receive each response and name back the science. Exit answers: 1. Grass. 2. Food and energy pass from the food to its eater. 3. The plant uses light to make food. The chain shows some food links. It cannot tell us the exact number of animals. Choose a real next teaching action without public scores.

Adaptations and evidence

Cognition and learning: Arrival: offer two clues; I do: one step at a time; independent: keep the evidence card visible and fade the first prompt no longer needed.

Communication and interaction: Hinge and evidence desk: rehearse one response, wait, then accept pointing, signing, speech, symbol, drawing or exact-word scribing.

SEMH: Arrival and review: familiar adult, private check-in, predictable first–then cue, agreed pause and quiet re-entry; one neutral next step.

Sensory and physical: Evidence desk and independent: low-density cards, no-touch/director route, accessible position and larger visual; staff handle equipment when required.

Evidence in this lesson: Two labelled chains, a repaired arrow, one cautious prediction and one model limit.

Evidence location: Book under the strip; record exact spoken or pointed responses with actual support. Genuine physical records remain linked to their original method.

Must teach core: A green plant is a producer: it makes food using light. An animal is a consumer: it eats to obtain food.

Shorten or merge: reduce the number of similar evidence cards; retain the hinge, one independent reason and the exit.

Safety and preparation

Kit: Plant and animal cards, paper arrows and a paper cover. You may use toy models too.

Do not pick up, touch or feed real plants or animals. Do not use gory examples. Do not talk about what you or other pupils eat.

Use the chain desk. Or tell an adult how to move the same paper cards.

You can point, sign, speak, draw or write. Or tell an adult what to do. Keep your own choices and exact words.

Put out just the kit for this stage. If you cannot take part safely, watch the teacher show it. In your book, write what you saw. Say what you can tell from it.

After the task, write what you saw. Say what it tells you about today's goal. Add the steps or a diagram only if they are part of the task.

Arrival and Exit keys

Eating grass.

For example, grass.

Food gives us the energy and parts we need to grow.

Pull.

1. Grass.

2. Food and energy pass from the food to its eater.

3. The plant uses light to make food. The chain shows some food links. It cannot tell us the exact number of animals.
