Use: Autumn Science: Show Your Thinking

Today I can… ☐ Say how friction helps in one case. Say how it hinders in one case. ☐ Say what we gain from a mechanism. Say what it costs. ☐ For a fair test, say what to change. Say what to measure. Say what to keep the same. ☐ Explain an orbit. Say why we see light from the Moon.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R ☐ [//] ☐ [?] _____

TA brief

Access and independence

No cold calling; nobody is asked to read difficult text aloud.

Beside the You do, mark I (independent), S (supported) or C (choice): the level of independence, not the effort.

Tell the teacher the barrier: reading, vocabulary, processing, regulation, writing or a science misconception. Avoid prompting through every question or dictating the final answer.

A pupil who missed last lesson: give the Arrival reminders and today's must-know words, not the missed lesson's work.

E Evidence on the school's evidence app

Lean capture on the school's evidence app (E): 30-second clip, photo, or one-line context note.

Point, sign, repeat after the adult, demonstrate, a clip on the school's evidence app, choice board.

Only the apparatus for the current stage is on the table. Demonstrate the method first.

If a pupil cannot safely take part, use a teacher demonstration and the same observation-and-conclusion task in the book.

Photograph the practical at the planned point, upload it to the school's evidence app with this code, and stick a copy in the book.

Lesson code: GROW-SCI-A1-W08-P2. Planned photograph: after the observation record and before the conclusion.

Prompt ladder

Prompt ladder for adults

1. Point to the relevant place / instruction.
2. Ask one short question: "What is it asking you to find?"
3. Rephrase the instruction in simpler language.
4. Provide a scaffold or limited choice.
5. Model the first step only, then return the task to the pupil.

00–04 · Arrival task

Read four prompts, sample privately and choose one route. IF NEW: use provided reminders. IF REVISION: retrieve before opening help.

Use: Autumn Science: Show Your Thinking

Today I can… □ Say how friction helps in one case. Say how it hinders in one case. □ Say what we gain from a mechanism. Say what it costs. □ For a fair test, say what to change. Say what to measure. Say what to keep the same. □ Explain an orbit. Say why we see light from the Moon.

Feedback: □ VF □ WS □ I □ NS □ E □ R □ [//] □ [?] _____

TA brief · continued

04–08 · Starter · choose a first idea

Receive a first idea without upgrading the pupil's meaning; return to it after the evidence. Starter expected answer: Choose the account naming the changed surface, matched conditions and measured distances. "It went farther" alone does not explain why. Here, compare 45 cm on smooth board with 19 cm on fabric for the same block; limit the claim to this comparison.

08–12 · I do · make the science visible

Keep the visible model and language linked. Pause at one observation; distinguish what the model shows from its limit.

12–16 · We do · everyone answers

Everyone commits. Secure: transfer. Mixed: compare two choices. Misconception: re-model, then use a fresh example. Access: change response mode.

16–19 · I do · connect the evidence

Model the evidence-to-reason connection; keep the stated limitation visible.

19–24 · We do · Connect each claim to its science

Pupil operates or directs. Name back the clue before any correction. Use the lightest prompt and fade it.

24–33 · You do

One adult supports the pupils needing access; the other holds the group, then swap roles across the week. Keep the first answer; give VF and one NS+; pupil edits // in the same colour on the same page.

33–36 · Review and improve

Use three minutes: hear one precise VF/NS+ (one minute), make a pupil-owned edit (one minute), then receive the explanation of the change (one minute). Keep the original meaning, use // and add R only after genuine adult audience.

36–40 · Exit ticket

Read the response privately. Pupil voice plus adult audience closes R only when both happen. Use the response to choose the next teaching route.

TA brief · continued

Evidence location

Book work beneath the strip, retained first answer and pupil-owned edit. Keep spoken, practical or photographic evidence under the same code.

Planned adaptation — Cognition and learning

Arrival and independent: one decision at a time; show a worked example, provide the topic word bank and fade the scaffold when the reason is secure.

Planned adaptation — Communication and interaction

We do: private thinking and partner rehearsal; accept pointing, signing, drawing, speaking or exact scribing. The pupil directs the decision.

Planned adaptation — SEMH

Predictable route choice, quiet pause and small re-entry step. Receive uncertainty calmly and keep correction private.

Planned adaptation — Sensory and physical

Model and practical: large diagrams, stable equipment, seated or no-touch director route; follow the topic safety note.

Planned adaptation — EAL

Pre-teach the named science words with the model; permit first-language planning and rehearsal. EAL is not SEN and does not reduce the science goal.

If behind — Must teach core

I can explain familiar science using an observation, model or genuine piece of work.

If behind — Shorten or merge

Shorten repeated rehearsal after a secure hinge; retain the individual explanation, safety and exit.

If behind — Next lesson

Use this evidence to choose the next topic route.

TA brief · continued

If behind — Dependency

Pass on the checked explanation and unresolved misconception; a group product cannot replace individual evidence.

Preparation and safety

Genuine books, prepared evidence cards and familiar models.

Use the diagrams and cards you have. You do not need a new test. Use any models in the safe way agreed in class.

TA brief · continued

First lesson back

Before the lesson, scan the books for five minutes. Look for genuine coverage and unfinished explanations; do not assume a missing page means the pupil was absent.

Ask the cover teacher and TAs what was taught, what was practised and what still needs teaching.

Check the roll against the books so that absence and missing evidence are kept separate.

Existing NS+ is history. Begin fresh feedback from what the pupil shows now; do not retrospectively close an old loop.

After the check, use one read, once, to shape Autumn 2. Choose the next teaching route from the pupil's evidence; do not add another record.

Say how friction helps in one case. Say how it hinders in one case.: Green — accurate independent explanation with relevant evidence; Amber — partial explanation or correct with a prompt; Red — missing explanation, misconception or access still unresolved. Green → transfer to a new example. Amber → one modelled example then a fresh attempt. Red → clarify access, re-teach this idea and check privately.

Say what we gain from a mechanism. Say what it costs.: Green — accurate independent explanation with relevant evidence; Amber — partial explanation or correct with a prompt; Red — missing explanation, misconception or access still unresolved. Green → transfer to a new example. Amber → one modelled example then a fresh attempt. Red → clarify access, re-teach this idea and check privately.

For a fair test, say what to change. Say what to measure. Say what to keep the same.: Green — accurate independent explanation with relevant evidence; Amber — partial explanation or correct with a prompt; Red — missing explanation, misconception or access still unresolved. Green → transfer to a new example. Amber → one modelled example then a fresh attempt. Red → clarify access, re-teach this idea and check privately.

Explain an orbit. Say why we see light from the Moon.: Green — accurate independent explanation with relevant evidence; Amber — partial explanation or correct with a prompt; Red — missing explanation, misconception or access still unresolved. Green → transfer to a new example. Amber → one modelled example then a fresh attempt. Red → clarify access, re-teach this idea and check privately.

The receiving teacher uses each criterion to set the next routes. No overall colour replaces the separate science decisions. Missing evidence is not evidence of completion.
