Non-linear careers and resilience

Tuesday 5 January 2027 · P3 · Year A

GROW · up to five learners · 40 minutes · formative lesson

Unit: Resilience & Change — Routes, choices & change

Thread tags: SMSC S/So (M/C: none); British Values IL/MR (D/RL/T: none).

Exact source outcome

I can analyse a career story and identify decisions, setbacks, support and transferable skills.

Weekly outcome: Students understand that career development includes change, setbacks, retraining and opportunity.

Source: specialist Careers scheme, GROW Careers physical row 16 / Spring 1 row 1. E16 intention; F16 focus; G16 outcome; H16 sequence; I16 timing; J16 evidence; K16 access; L16 support; M16 end check; N16 F.

Question and success checks

How can a career change, and what can help a person take another step?

1. Put story stages in order and identify turning points. 2. Identify a decision, setback, support and transferable skill with story clues. 3. Explain how at least two factors influenced the journey.

Prepare

Books, pens, stories A/B, category guide, vocabulary and evidence record. Provide normal reading/scribing/typing aids. No prior lesson, visitor, internet, equipment or personal experience is needed. The stories are invented and unnamed. Keep the separate adult answer pages out of first responses.

Source adaptation

I16 timing retained: retrieval 5, input 7, guided analysis 10, increasingly independent application 13, reflection 5. H16 factors are addressed through fictional stories: redundancy and caring in A; health change, relocation and changing interests in B. Sensitive matters stay in the third person without diagnostic or personal detail. Extract useful strategies without portraying difficulty as deserved, necessary or automatically beneficial.

Where this leads

This helps me see more than one route, notice skills I can use again and ask for support when a plan changes.

Sequence and teaching actions

Phase	Min	Action and evidence
Retrieval	5	Arrival prompt: a worker checks a shop order, then checks an office record. What skill could be used in both? Accept a clue; introduce transfer if new.
Explicit input	7	Teach career change and the four categories. Model A stages 1–2: fact, turning point and effect. Explain that a role ending is an event, not the worker choosing to fail.
Guided analysis	10	Read A in stages. Order the timeline, discuss choices and support, and explain how redundancy and caring affect the route. Use hinge and fade the model.
Independent application	13	Choose B, or A with support. Annotate the timeline and four categories. Explain two factors and an old-to-new skill link. Add a useful strategy and a realistic limit.
Reflection	5	Check story evidence, give one NS and retain a short revision. Save the annotated journey in Careers Portfolio/action plan. Reflect on a useful strategy without disclosing personal events.

5 + 7 + 10 + 13 + 5 = 40 minutes. Chunk within each phase; use short pauses and agreed return points. Normal access continues as answer prompts fade.

Arrival and retrieval

Have the short shop/office prompt ready. “Checking details” or “asking a clear question” can transfer. This is a bridge from earlier skills work, not a prerequisite. A worker may need new learning as well as existing skills.

Teaching the timeline

Use numbered stages and text labels so colour is not needed. Ask what happened, what the person chose, what help was available and what followed. A stage can involve more than one category; accept justified overlap. Keep sequence separate from cause.

Independent record

In your book, write the story label and numbered stages. Add decision, setback, support and transferable-skill notes with clues. Write two because links for factors that changed the journey. Optional Type instead has the same demand. The sample future steps remain plans, not completed jobs.

Routes and planned access

Independent

Analyse B or compare it with A. Select precise stage clues, explain two influences and show a skill used before and again. Separate stated fact from a reasonable inference and keep a limit. A different evidence-based interpretation is welcome.

Supported

Read one stage at a time. Use the category guide, numbered timeline, separate model and sentence frames. Rehearse a because link privately. Keep all four outcome categories and two influence explanations, then fade answer prompts where secure.

Floor

Use A and the short choices. Read aloud or scribe the learner’s own thinking. Choose a category, then point to a story clue and give its effect. Sequence the four stages; identify all four categories and explain two influences through speech, scribe or usual aids. Choices alone are partial.

Cognition and Learning

Use explicit instruction, modelling, guided practice and retrieval. Chunk each stage, keep category meanings visible and use a numbered timeline. Allow processing time and a checklist. Ask for one link at a time.

Communication and Interaction

Pre-teach decision, setback, support and transfer. Offer private rehearsal, short frames and read-aloud support. Accept speech, typing, scribe or usual communication aids. No cold calling. Ask for the learner’s idea, not an adult-completed answer.

SEMH

Explain the fictional nature of the stories. Do not ask about personal or family job loss, illness, caring or moves. Permit a pass, quieter response or regulation break with return. Use a trusted adult or the school’s help route privately if the topic is difficult.

Sensory and Physical

Use clear print, numbered labels, normal aids and accessible seating. The lesson is reading and discussion only. Do not use colour alone to distinguish categories or outcomes; no physical repair task is required.

EAL

Plan in any language. Pre-teach key words with concrete examples. Read a stage, pause, then check meaning. Separate language access from analysis. Normal aids continue while answer scaffolds fade.

Teaching checks and feedback

Worked example and fade

A stage 2: the business changes and the shop role ends. Mark this as a setback. The effect is that the worker must seek another route. Do not label it a choice or poor effort. Model the fact-to-effect link, jointly analyse stage 3, then let learners apply the categories to B.

Check after the model

Which is a decision: the business ends a role, or the worker chooses a shorter class? The class is the worker's choice. The role ending is a setback in this story. Ask for the stage clue.

Main hinge

"The shop role ended, so the worker must have worked badly." A agree, or B the story says the business changed and gives no evidence of poor work? B. If any learner is unsure, separate stated fact from assumption, then use the parallel hinge.

Parallel hinge

"The worker starts a course, so a job is certain." A agree, or B the course is a next step and the story states no job offer? B. If insecure, separate a planned action from a confirmed outcome and re-check another stage.

Misconceptions and corrections

A career need not move in one straight line. A setback is not proof of poor character or effort. Resilience can include pausing, asking for support or changing a plan. Skills can transfer, but new tasks may also need learning. Support and opportunity vary; effort alone does not remove every barrier or guarantee a job.

Speaking frames

Floor: "At stage ... , ... happened." Medium: "This changed the route because ... ." High: "The story shows ... . This suggests ... , but ... is still unknown." Skill link: "The worker used ... in ... and now uses it in ... ."

TA focus and prompt ladder

Input: check category meanings. Guided work: point to a clue and ask for its effect. Independent work: preserve first thinking and record answer prompts. Prompt ladder: 1 point to place/instruction; 2 ask a short question; 3 rephrase; 4 provide scaffold/choice; 5 model the first step only, then return the task.

Evidence and next steps

What this lesson can evidence

J16 annotated career-journey case study. Retain ordered stages and turning points; decision, setback, support and transferable-skill notes with clues; two factors and their effects. M16 asks for two factors influencing the journey. The exact outcome also requires all four categories. N16 F: formative; Spring 1 Week 6 is assessing.

Secure and partial evidence

Secure: a learner links redundancy to seeking another route, caring hours to class choice, advice to comparing times, and shop checking skills to the office task. Partial: labels without clues or effects, copied model with no understanding, only one influence, or naming a skill without showing its use before and again.

Private help route

Keep all case discussion in the third person. A learner may ask a trusted adult privately or use the school’s help route. Offer a pause, neutral task and agreed return if needed. Staff follow the usual school response if a concern is shared; do not seek disclosure or promise secrecy.

Boundaries

No names, real locations, employers, products or live sources. These are invented examples, not advice about individual health, employment rights or eligibility. Avoid blaming a worker for external barriers or presenting suffering as a required step to success. No learner history or future outcome is invented.

Response and feedback

Book first. Optional Type instead has the same demand. Retain source label, first response, normal access, actual answer help and one revision. Offer to the Communication portfolio. E only for actual banked evidence; staff confirm any accredited mapping.

VF verbal feedback · WS worked with support · I independent · NS next step in green · // self-edit · ? read this back · E actual banked evidence · R after Voice, Audience, NS and a response in the same colour, on the same page or usual mode.

Spring 1 runs 4 January–12 February 2027 for six weeks. This return is Careers GROW Week 1 only. Next return in the owner’s sequence is BUILD RSHE Week 1; Careers GROW Week 2 follows after all six Week 1 lines.
