Staff answers and teaching guide

Exact outcome

I can analyse a career story and identify decisions, setbacks, support and transferable skills.

GROW Careers row 16 / Spring 1 row 1. E16 change/setbacks/retraining/opportunity; H16 timeline and sensitive change factors; I16 5/7/10/13/5; J16 annotated journey; M16 two influences; N16 F. Six-week Spring 1, Week 6 assessing.

Analysis before labels

A useful response identifies a stage clue and explains why it matters. A timeline shows order; analysis explains effects. The same stage can contain support and a choice. Accept justified overlap rather than forcing each event into exactly one category.

Model and fade

Model A stage 2 only: business changes, role ends, another route is needed. Then guide stage 3 and allow B or independent A analysis. Keep normal aids and reduce answer prompts when the learner can supply the clue and effect.

Boundaries and private help

Use invented stories only. No personal or family questions about health, caring, redundancy or relocation. No diagnoses, treatment advice, employment-rights advice or job eligibility claims. Give a private route to a trusted adult or the school’s help route, with a pause and return option. Staff follow normal procedures for a concern, without probing for disclosure.

Fair explanation of resilience

Support and opportunity differ. The worker is not responsible for every barrier. Do not imply hardship builds character, that staying positive solves structural barriers, or that every setback leads to success. Resilience may involve rest, help, new learning, a revised plan or stopping an unsuitable route.

Story analysis and possible answers

Part	A shop to office learning	B stock to repair learning
Decision	Choose a shorter office class after comparing times.	Choose an introductory repair course after a changed interest.
Setback	Shop role ends after business change.	Health change causes pause; move makes old journey impractical.
Support	Adviser compares course times with available hours.	Adviser compares options/travel; tutor chunks learning and allows questions.
Skill transfer	Clear questions and order checks become checks on booking record.	Item-code checks and records become parts-list and paper-plan checks.
Influences	Redundancy creates need for another route; caring affects class timing.	Health change prompts pause; move changes travel; repair interest affects study choice.
Strategy and limit	Advice and manageable learning step; no job offer stated.	Time, help and skills reused; suitable work/training not promised.

Sample causal links

A: “Redundancy affected the route because the role ended and the worker needed another option. Caring affected the class choice because the worker could not attend all day.” B: “The move affected the route because the old journey was not practical. Interest in repair affected the decision to take the course.”

Transfer must connect tasks

Accept checking details, clear questions or accurate records where supported by the story. State the old and new tasks. “Team work” without a story clue is not enough here. A plausible added skill must be labelled an inference and explained; prioritise the given evidence.

Checks misconceptions and next steps

After the model

Choosing the shorter class is the worker’s decision. The business ending the role is a setback. A worker can choose a response to an event without choosing the event itself.

Main hinge

B: the story describes business change, not poor work. If unsure, separate a stated fact, assumption and missing detail before the parallel hinge.

Parallel hinge

B: starting a course is a next step, not a guaranteed job. Re-check story A stage 4 or B stage 5.

Floor key

A, A, B, A, B, A. Choice answers alone are partial. Retain stage order, four categories, clues, two influence explanations and a skill used before and again.

Common partial responses

“They were resilient” gives no strategy. “They learned” gives no transferable skill. A timeline with labels but no effects is not full analysis. A course plan is not a confirmed place or job. Two examples of the same factor may not show two distinct influences.

One useful next step

Choose one: “Add the stage clue.” “Explain how that factor changed the route.” “Name the task where the skill was first used.” “Show the same skill in the new task.” “Separate a plan from a confirmed result.” Keep the learner’s first response and revision.

Evidence and portfolio record

What secure work includes

Ordered story stages with a turning point; decision, setback, support and transferable skill linked to clues; two factors explained through their effects. A useful resilience strategy and a realistic limit deepen the analysis. Do not require a positive ending or personal disclosure.

Assessment judgement

N16 formative. Record secure, partial or not yet against the actual response and support used. Reader/scribe/typing are normal access; adult answer supply is logged separately. M16 two factors does not replace the four-part exact outcome. Allow equivalent wording and justified overlap between categories.

Retention

Keep the annotated case study, story label, work reference, actual access and prompts, one NS and revision. Update Careers Portfolio/action plan. Offer to the Communication portfolio. E for actual banked evidence; R after Voice, Audience, NS and response in the same colour, on the same page or usual mode. Staff confirm any accredited mapping from actual work.

Calendar and queue

Tuesday 5 January 2027, P3, Year A. Spring 1 is six weeks, 4 January–12 February; Week 6 assessing. This return contains GROW Careers Week 1 only. BUILD RSHE Week 1 follows after Downloaded. The other Week 1 lines come before any Week 2 line. Separate later RSE topics remain outside this brief.
