Staff answers and decision rules

GROW Spring 1 Week 2 Wednesday 13 January 2027 P5 Year A Explore

Examples are adult models. They are never prefilled pupil evidence.

Arrival

Compare only matching tasks. A new baseline can still support useful learning today.

Starter

For example: The gap after mark two was smaller. My last action came sooner. Already steady is also a valid starting observation.

I do

Check: Which comparison is fair? A four marks before and ten after, B quiet taps before and a picture after, or C the same four-part test with similar conditions? C. If unclear, name the one feature and repeat matching examples.

We do

If A or C is chosen, model an unchanged outcome without blame. Parallel check: If the last action still comes early, can the log say that and plan another try? Yes. Continue when the pupil accepts an honest comparison.

Create

If form or support must change for access, explain it in the log. A new-form baseline and later matching test can show progress in that form, not a direct improvement claim over the old-form test.

Review

Useful: Three gaps look more alike now. The last action still came early. I used more help today. Do not force better as the only valid answer.

Exit

Example only: Before, my final gap was short. After, it was still short. I kept a steady start. Next I will practise the last gap.

Teacher example

Teacher model only: My skill was even gaps in four repeated marks. Before, one gap was small. After, the gaps looked more alike. I used the same mark and cue. Next I will try the technique in a short pattern.

Teacher model only: My skill was a steady four-action pace. Before, the last action came early. After, it still came early. The start stayed steady. Next I will practise just the final gap.
