Staff answers and response guide

Build my card bridge model

These are possible responses and task guides, not learner observations. Accept a defensible answer based on the facts or actual work. Record each learner's reasoning and support.

Card key

Card	Judgement or step	Possible action
A	Step 1. The model begins with the agreed plan.	Check 20 cm by 8 cm and both fold lines.
B	Step 2. The middle panel should be 4 cm wide.	Pause and ask if a mark does not fit the plan.
C	Step 3. The fold follows the marked line.	Press gently on a flat desk with adult support if needed.
D	Step 4. The two sides form a channel shape.	Check that each side is about 2 cm high.
E	Step 5. A centred 20 cm model has 5 cm at each end on a support.	Ask staff to check the supports and fit.
F	Step 6. The actual model is evidence of building.	Keep a photo or work reference and note any help.

Model and hinge

Check the card: 20 cm long and 8 cm wide. Find lines 2 cm and 6 cm from one long edge. Fold each outer panel up along its line. Keep the middle 4 cm panel flat. Place it across a 10 cm gap between supports. Centre it: 5 cm rests on each support.

B. Check the 2 cm and 6 cm lines from the same reference edge. Ask the adult whether the fold can be corrected or a spare blank is needed; record the help and change. A hides rather than resolves the mismatch; C introduces unplanned cutting. Re-model a fold on scrap card if needed.

Individual evidence key

A 20 by 8 cm blank folded at 2 cm and 6 cm gives a 4 cm base and two 2 cm sides. A centred 20 cm length across a 10 cm gap rests 5 cm on each support. Check actual folds and fit. Capture the model, not just a plan. Record adult-started folds or a supplied pre-marked blank. No load, strength or award completion result is inferred.

Feedback boundaries and next teaching

Card A: Use the accepted Week 2 work. If absent, provide a spare pre-marked blank and record that preparation as adult support, not pupil marking-out evidence.

Card B: Do not guess a new fold. Both lines use the same reference edge.

Card C: Use suitable card that folds by hand. No scoring knife, cutting tool or sharp creasing tool.

Card D: Adult may steady or start a crease; record who did what. Do not claim independence when the adult made the fold.

Card E: Staff set equal-height supports on a tray. This is a fit check with no added load. Use only pre-torn tape if an agreed join needs securing.

Card F: No strength result is claimed. Store without crushing folds; a blank worksheet is not evidence of a built model.

Common misunderstandings

A drawn plan is not a built model. A fit check without a load does not show strength. Correcting a fold or asking for help is part of making. A neat appearance alone does not prove that the model will hold a load.

Teaching boundary

Use hand-foldable card with clean edges and no staples. Learners fold by hand; adults can steady the card. No pupil cutting, sharp scoring tools, blades, hot glue, power tools or load tests. Supports sit on a stable low desk/tray; no standing on a model or testing with hands or body weight.

Feedback

If a reason is missing, return to the fact or actual work. Re-model a different example, then keep the learner's own revision. Use NS+ and the learner response, in the same colour, on the same page or usual mode, before R. E means evidence actually banked. Keep safeguarding records separate.

Assessment boundary

LAUNCH-DT-W3-E1 contributes to the source assessment. No criterion, registration or award completion is invented. Sources: FACTS_LEDGER.md.
