Teacher and cover plan

Tuesday 1 December 2026 | P6 | 40 minutes

Lesson

A clear chart | Tuesday 1 December 2026 | Tuesday P6 | 40 minutes
LAUNCH pair. Year A. Formative; Week 7 is assessing.

Aim

I can make a clear chart and use its data to explain a comparison.

Theme

Identity & Belonging: explain a fictional shared activity kit clearly while keeping each learner responsible for their own work.

Careers

Office and stock roles use charts to explain resource needs. A clear chart and a checked comparison can show a digital skill in an application.

Prepare

Open the fourteen-slide lesson or HTML page. Open Spreadsheet_Practice.xlsx in a spreadsheet. Task has data and no chart; Model has a completed chart. Save a fresh copy for each learner. Print the data card, chosen route and evidence prompts; offer pink paper. Use books, pens and up to two devices.

Participation

Model first. Use private responses, no cold calling and no required reading aloud. Offer pointing, typing, book work or quiet conversation. Read privately on request. Keep pupil answers off the shared display.

Success

I chose the three items and their points.
I used a clear title, labels and a scale from zero.
I checked a change, explained a comparison and reopened my file.

Lesson sequence

Tuesday 1 December 2026 | P6 | 40 minutes

0 to 3 minutes Arrival

Slides 1-2. Check Task points against the data card. Retrieve the Week 4 check habit.

3 to 7 Starter

Slide 3. Choose item names and points to compare.

7 to 10 Model selection

Slide 4. On Model select A3:B6 and create a column chart. Exclude row 7.

10 to 13 Model clarity

Slide 5. Add title, labels and points. Use zero and equal steps. Match a column to a cell.

13 to 15 Words

Slide 6. Teach category, axis and scale using the chart.

15 to 20 Together

Slide 7. Predict Model B6=10, test the update, then restore B6=4.

20 to 23 Hinge

Slide 8. Should the whole total be a fourth item? Re-model if needed; parallel check tests units.

23 to 35 Task

Slides 9-13. Create a Task chart, label, change B4 to 12, compare and save. One device: six minutes each.

35 to 40 Exit

Slide 14. Read a fresh chart, reopen saved work and respond to one next step.

Modelling and adaptations

Tuesday 1 December 2026 | P6 | 40 minutes

Model data and chart

Model points are 6, 6 and 4; whole total 16. Use A3:B6. The supplied completed chart is a rehearsal and fallback; delete it in a disposable copy for live modelling. Title: Model kit points. Item labels; vertical axis Total points; horizontal axis Item. Scale 0 to 10 in steps of 2.

Change demonstration

Predict B6 changing from 4 to 10. The fastener column rises to 10; paper and card remain 6. Whole total becomes 22 but is not plotted. Restore B6 to 4. A chart must be linked to its cells, not a pasted picture.

Cognition and learning

Chunk selection, chart insertion and labels into separate steps. Point to one item and its value. Fade from a complete model to a range prompt, then an independent check. Keep the data visible.

Communication and EAL

Use the word page and frame: ... points is ... more than ... . Allow planning in any language. Accept pointing to two bars before a written or quiet spoken comparison.

SEMH and access

Use predictable stages and quiet thinking time. No learner comparison or surprise public question. Offer a brief pause within stage time. Provide pink paper, zoom, uncluttered view and exact adult typing if needed; record that support.

Misconceptions

The total is another item: it combines the same data, so exclude it. A taller bar means more packs: the axis shows points. A decorative chart is clear: inspect units, values and scale first.

Evidence and next steps

Tuesday 1 December 2026 | P6 | 40 minutes

Core evidence

Observe range A3:B6, three plotted values, title, item labels, unit, zero baseline and equal intervals. Check the B4 change, a comparison with two values and a reopened saved file. Distinguish pupil choices from adult typing.

Task answers

Initially 20, 10 and 8 points; whole total 38. After B4=12 the chart is 12, 10 and 8; total 30. Paper remains highest. Paper exceeds card by 10 before the change and 2 after. Keep B4=12. The total row is not plotted.

Saving and turn-taking

Use ICT_Practice/W05_Charts. Save as Chart_A_v1 or Chart_B_v1 with the workbook extension. One device: two six-minute turns, each in their own file. The other pupil plans in their book. Aspire keeps v1 and saves v2.

Feedback

Give one success and one NS. Record VF, WS or I accurately. The pupil responds in the same colour, on the same page or usual mode. Use R only after the response and an adult audience have both happened.

Paper fallback

Draw and label a chart in the book from the same data. This shows planning and interpretation. Mark digital chart creation, linked update and saving not yet observed; complete these when a device is available.

Progression

Secure: clear linked chart and accurate comparison. Developing: wrong range, unclear units or untested update. Revisit one step. Week 6 makes an accessible presentation. Week 7 is assessing.
