Staff answers and teaching notes

Exact outcome

Build personal resilience and a growth mindset.

Lesson success check

Describe what resilience means and one way to keep going when something is hard.

Core meanings

Accept resilience as finding a way forward, adapting or recovering when things are hard, with support where needed. A growth mindset allows for skills to develop through useful practice, feedback and support. Avoid fixed labels for learners or claims that positive words, effort alone or this lesson guarantee improvement.

Starter and model A

Starter: ask for one step. It reduces the amount to follow. A’s difficulty is a stand that falls over; feedback identifies the narrow base. A feasible next step is to ask for a wider-fold model and test that change. “I have not made it stand yet. I can learn a wider fold” adds a concrete action. A planned pause and adult support are valid if needed.

Guided choices and check

Match a wider fold to changing the base. To improve “try harder in the same way”, use a wider-fold model, change the base and check the result. Check after modelling: the useful step changes the approach using feedback. Repeating without checking does not use the available information. Accept equivalent words.

Hinge and parallel hinge

Main A: use feedback and change one step. Parallel B: asking for help can be part of resilience. If unclear, point back to A’s specific feedback, re-model one step and repeat privately. Keep normal access aids. A pass is unobserved.

Safe teaching scope

No personal setbacks, trauma stories, stress scores, public voting or compulsory real-world performance. Do not equate persistence with obedience or staying in an unsafe situation. A pause, a different approach, an adjusted task or more support may be needed. No clinical or treatment claims.

Two choices with the same learning

Choice 1 B Next step map

Explain resilience in plain words. Barrier: the pattern does not match. Strategy: compare the model one shape at a time, then draw/check that shape. Reason: a small comparison helps locate the mismatch. Learning line: “I have not matched it yet. I can check one shape at a time.” Private help: ask a trusted adult to make the step clearer. A different feasible strategy is acceptable if the reason fits.

Choice 2 C Support note

“Resilience means finding a way forward when things are hard, with support if needed. The listener cannot follow the order. You could write and practise one clear first step with an adult. This gives the listener a place to start. Your explanation is not clear yet, but you can practise one step and get feedback. Ask a trusted adult in private for help.” Accept a typed or aided explanation agreed with the adult.

Equal demand

Both choices explain resilience, link one feasible strategy to a barrier, and add a realistic learning line and private help. A map needs no polished diagram; a note needs no extra length. Usual reading, typing and scribing do not remove independence of thought. Log adult-supplied content separately.

Review and exit

Improve “Just keep going. You will get it right” by naming a specific change and reason, without guaranteeing success. Example: compare one shape with the model to find the mismatch. Exit: resilience can involve a new approach and help; asking for help does not mean failure.

Aspire

B: compare the next shape; if still unclear, ask for a model or smaller step. C: ask whether the first instruction is clear; if not, get feedback or agree another response mode. Check the strategy, not the person’s worth. A useful next step may need changing.

Evidence access and private support

Judgements

Record explanation and strategy application separately. Secure explanation includes adapting or finding a way forward through difficulty, with support if needed. Secure strategy evidence gives one feasible next step and why it fits the case. Record the realistic learning line and help route alongside these. Do not claim the learner has become resilient or changed a lasting mindset from one response. Partial evidence is retained. No response, including a pass, is unobserved.

Typed and scribed routes

Editable Evidence Sheet page 2 has blank fields for the map and a Support note if chosen cell. Offer typing for either task. Save with the usual routine, lesson code and work reference. If typing is unavailable, use a book, aid or exact scribe. Read the response back privately and allow correction.

Feedback

Give one NS such as adding a reason or making the step specific. Retain first thinking and reply. R follows Voice, Audience, NS and response; E means actual work saved. Offer to the Communication portfolio. Staff confirm any accredited mapping.

Private route and staff response

Use a trusted adult and the school’s help route. Point to HELP, type or write a private request, or use an aid. If one adult is busy or help is insufficient, use the route to another. No need to keep trying alone. Listen calmly, avoid probing or secrecy promises, and follow usual procedures. Keep concerns outside shared evidence. Stop and get immediate on-site support for urgent concerns.

Source and continuity

GROW Weekly - Spring C65 supplies the exact outcome, B65 the week. Shared strand and resource context comes from A64 and D64–F64 and is rendered generically. Owner confirms Wednesday 13 January 2027 P3, up to five learners and a six-week term with Week 6 assessing. This lesson is formative. Only Week 2 authored. Next is GROW PSHE Week 3, row 66, after Downloaded.
