Teacher and cover planner

Sectors occupations and job families

Tuesday 3 November 2026 · P3 · one 40-minute lesson · Year A

GROW · up to five learners · Independent is the default

Unit: Identity & Belonging — Belonging in work

Thread tags: SMSC S/So (M/C: none); British Values IL/MR (D/RL/T: none).

Exact source outcome

I can explain the difference between a sector and an occupation and map roles within at least four sectors.

Students understand how occupations sit within sectors and how one sector contains many types and levels of work.

Source: specialist Careers scheme, GROW Careers row 9. Focus F9, outcome G9, five teaching phases I9, map evidence J9 and end check M9. The preceding profile resources inform retrieval only.

Question and success checks

How can one sector contain many different occupations?

Explain sector and occupation with an accurate example of each. Map occupations into at least four sectors, using task evidence from the supplied cards. Show different role types, identify an occupation that crosses sectors and explain one job family.

Prepare

Provide the four sector source cards, twenty occupation cards, five role-type labels, an administration job-family strip and a blank four-sector map for each learner. Use the cards as the preselected information source; no online research or current labour-market data is required. Prepare a separate demonstration map and the complete adult key. Offer a chunked card set and a four-sector Floor scaffold with two occupation options per row. Keep eight preselected support cards ready: HC1, HC3, CO1, CO3, ED2, ED5, RE1 and RE4; this set spans all five role types. Have a previous profile or shortlist available only if it exists and the learner chooses to use it privately. Otherwise use the supplied fictional retrieval prompt. Books are the default; reader, scribe, usual aid and typing are normal ways of working. Arrange quiet adult check-ins, extra processing time and a regulation break with a supported return.

Retrieval without assumed completion

Reconnect the preceding profile, shortlist and enquiry plan to a wider look at work, without assessing the old profile again.

If you have a previous profile and want to use it privately, retrieve one career area and a question you still have.

Otherwise read the fictional prompt and identify its career area and unanswered question.

Explain that today widens the map of occupations within sectors; no final career choice is required.

A made up profile prompt: A fictional learner has shortlisted construction and care work. They know both areas contain many jobs but do not yet know the different tasks. Their next question is: which occupations could I investigate within each area?

Where this leads

This helps me see the range of work within sectors and compare related occupations.

Lesson resource · CC BY-NC-SA 4.0: free for classroom use, share and adapt with credit, no resale

Forty minute teaching sequence

Phase	Min	Teaching and evidence
Retrieval	5	Retrieve a voluntary career area and question from an existing profile, or use the fictional prompt.
Explicit input	7	Model sector, occupation, task and job family on a separate example.
Guided analysis	10	Compare four sectors and five overlapping role types; check privately and discuss cross-sector administration.
Independent application	13	Create an individual four-sector map, reasons and added links; log prompts and revisions.
Reflection	5	Check the sector/occupation distinction with examples, review the map and retain an actual next question.

The five phases total 40 minutes. Within application, allow about eight minutes to map, three to explain links and two to check. Slide references, vocabulary, evidence capture and review sit within these phases; they add no extra minutes.

Hinge and parallel check

Private individual check during guided analysis: a retail organisation has an administrator who keeps staff records. Which is the sector: retail or administrator? Expected: retail is the sector, administrator the occupation. Ask for the task clue. If unsure, use the prompt ladder and model only the first distinction. Parallel check: an education setting has a technician who prepares equipment. Expected: education is the sector, technician is the occupation; preparing equipment is the task. If still unsure, use the four-sector Floor scaffold and record actual help and incomplete demand. No cold calling or inference from a group answer.

Prompt ladder

1. Point to the place or instruction.
2. Ask a short question.
3. Rephrase the instruction.
4. Provide a scaffold or choice.
5. Model the first step only, then return the task.

Normal reader, scribe, typing or usual-aid access may remain on Independent. Record access separately from prompts that supply help with an answer. Fade answer scaffolds where secure while retaining normal access.

Routes and access

Independent

Default. Compare and justify using the supplied structured source cards. Complete the four-sector map, accurate occupation placements in all four sectors, a task-based reason in each row, all five role types across the map, a cross-sector occupation explanation and a job-family example. Use your own wording and record help.

Supported

Use chunked texts, the separate model, vocabulary bank, preselected occupation source cards and private prompt questions. Keep four sector rows and the same target visible; begin with HC1, HC3, CO1, CO3, ED2, ED5, RE1 and RE4, then add administrator as a cross-sector example. Read one row at a time and fade scaffolds when secure. Record any demand not yet shown.

Floor

Use simplified wording or multiple-choice checks, the four labelled sector rows, pictures or word choices and reader/scribe/typing as normal. For each sector choose from two occupation options and point to an action supporting the match. Check the sector/occupation distinction in simplified wording. Keep the exact four-sector outcome: record partial core evidence if fewer than four sectors or the distinction are demonstrated. Record role-type, cross-sector, family and explanation evidence separately; offer extra visual choices for these features without pretending an adult answer is the learner’s own.

Cognition and Learning

Use explicit instruction and a separate worked sector–occupation–task example, then fade the model. Chunk the cards and map one row at a time. Use the source vocabulary bank, a clear four-row scaffold and a private check after modelling.

Communication and Interaction

Reader, scribe, typing, pointing and the usual aid are normal ways of working. Allow extra processing and a private response. Rehearse a purposeful task question if useful; no cold calling or compulsory pair talk. Normal access stays available when answer scaffolds fade; record access separately from answer prompts.

SEMH

Predictable five-phase lesson, calm retrieval and regulation break with a supported return. Personal profile retrieval is voluntary; use the fictional prompt if preferred. Value different occupations without ranking learners or demanding a final career choice.

Sensory and Physical

Use large clear print, reading strip or usual overlay, uncluttered cards and a single-row view. Staff may position cards or scribe. Typing and access aids are normal; no physical job performance or colour-only distinction.

EAL

Preteach sector, occupation, task and job family with the model cards. Plan in any language. Offer a private read-aloud, familiar-language explanation, pointing and sentence stems, with actual help recorded.

Lesson resource · CC BY-NC-SA 4.0: free for classroom use, share and adapt with credit, no resale

Staff prompts and map checks

Speaking frames and private questions

F frame: The sector is ... . One occupation is ... . The worker ... . Private question: Which word names the broad work area, and which names the job?

M frame: This occupation fits ... because its task is ... . The source card says ... . Private question: Which task on the source card supports this placement?

H frame: The occupation ... could occur in ... and ... because ... . These occupations form a job family because ... . The role types may overlap when ... . Private question: Could this occupation work in another sector? What similar tasks make these occupations a job family?

Staff focus

I do: Check sector/occupation/task language and model source use on a separate example. Prompt a card clue rather than supplying an answer. Reader/scribe/typing as agreed; fade the model when secure.

We do: Chunk comparison across the four sectors, take individual private hinge responses and use the parallel check after reteaching. Clarify role-type overlap and the cross-sector administrator.

Independent: Log participation and individual evidence. Support source selection and one row at a time; prompt reasons instead of supplying placements. Offer a regulation break and return-to-learn. Fade prompts where secure and record any unmet four-sector demand.

Misconceptions

Sector and occupation mean the same thing. A sector is a broad area of work; an occupation is a particular kind of job. Retail is a sector; checkout assistant is an occupation.

Each sector has one kind of worker, and an occupation can belong to only one sector. One sector contains many occupations and overlapping role types. An administrator can work in several sectors; administration is a related job family, not a sector.

Core outcome and added features

CAREERS-GROW-A2-W01-E1: An individual sector/occupation map covering at least four sectors, with accurate sector and occupation examples, task-based placement reasons, different role types, a cross-sector occupation and a job-family link; retain actual support and any revised thinking.

Keep the learner’s own sector/occupation distinction, four-sector map and work reference. Each of the four sectors needs an accurate occupation placement; record a reason grounded in a card’s task for one placement per sector. Add further occupations to show the range of work. Across the map include examples of frontline, technical, professional, support and management work. Retain a cross-sector occupation example with an explanation and a job-family example. A role-type label is a teaching description and may overlap another label; it is not a formal qualification or seniority rank. Keep first placements before prompting and revisions separately with actual help. A group map, adult model or typed copy alone does not establish individual understanding. Assess the exact core outcome separately from the added map features: an accurate sector/occupation distinction and role mapping within at least four sectors. Record role-type, cross-sector, family and explanation evidence separately. If fewer than four sectors or the distinction are demonstrated, record partial core evidence without claiming the full outcome. No practical job performance, real employer contact or entry-rule knowledge is assessed.

The exact core outcome requires an accurate sector/occupation distinction and an accurate occupation placement in each of at least four sectors. A second role in every sector is not a core minimum. Role-type variety, reasons, cross-sector work and a family explanation are recorded as separate map features. Four accurate Floor choices can contribute mapping evidence when the choices are genuinely the learner’s; check the distinction separately.

Safe teaching and feedback

Assessment

GROW Careers N9 is formative. Assess the sector/occupation distinction and map, using the source end check: can the learner distinguish sector from occupation and give an example of each? The full stated lesson outcome also requires mapping roles within at least four sectors. Keep actual support, gaps, first and changed thinking. Source Week 6 has a combined formative and summative role and Week 7 is summative; do not label all earlier weeks solely formative. Any qualification or accredited-unit mapping is for staff to confirm from actual evidence; no completion is inferred.

Boundaries

Use generic sector and occupation examples only. The supplied cards are authored teaching information, not current vacancy, salary, qualification, employer or entry-rule information. They are not an official industry-classification system. Examples can overlap when the learner supplies a plausible workplace context and task-based reason. Do not imply each occupation belongs to only one sector or each job family is one sector. Role types overlap and are not a ranking of people, a fixed progression ladder or a claim about entry requirements. Personal profile retrieval is voluntary and private; no family, body, private history or fixed career choice is required. No cold calling, forced public answers, forced pair work or public performance. Accept not sure yet with a next question; offer a pause and supported return. Follow the usual safeguarding route if a concern is raised.

Response and feedback

Work in the book by default. Reader, scribe, speech, pointing, usual aid and typing are normal ways of working, with actual support recorded. Type instead uses an equivalent editable area: sector/occupation explanation, four sector rows, occupation placements and task-based reasons, role types, cross-sector example, job family, first thinking, help, revision and reflection. Normal typing is not a different attainment route. No pupil phone, login or online service is needed. Normal reader, scribe, typing or access-aid use does not automatically move a learner to Supported or reduce the independence of their thinking. Record access mode separately from prompts that supply help with an answer. Fade answer scaffolds where secure; retain normal access.

VF verbal feedback; WS worked with support; I independent; NS next step in green pen; // self-edit; ? read this back to me; E evidence; R responded. Give one precise next step linked to the map or explanation. R requires Voice and Audience, the NS and a learner response in their own colour; a private adult may be the audience. Use E only when actual evidence is banked. Preserve first thinking and later response separately.

Portfolio and reflection

Retain actual individual work in the Careers Portfolio or action plan under usual arrangements. Offer a genuine explanation, question or support request to the Communication portfolio; staff confirm any mapping. Do not bank a blank form or adult model.

Next teaching need _____ Learner request and change made _____

Year A. Autumn 2 Week 1, 2–6 November 2026. Tuesday 3 November 2026, P3. One 40-minute formative lesson for up to five learners. Week 7 is assessing; later source assessment roles remain as recorded in the scheme. No clock time is supplied.

Provenance: specialist source outcome and phases retained; generic source cards, source map, Floor choices and records are newly authored. The supplied preceding lesson informs voluntary retrieval and the familiar resource layout.
