TA brief

Priority: settle, wait and protect the learning goal. Use the least prompt that gives access, then fade it.

Prompt ladder: 1. Point to the relevant place / instruction. 2. Ask one short question: "What is it asking you to find?" 3. Rephrase the instruction in simpler language. 4. Provide a scaffold or limited choice. 5. Model the first step only, then return the task to the pupil.

Allow processing time first. Use the least of these five prompts that gives access. Fade it as soon as the pupil continues.

Read the current task exactly while it stays visible. Accept pointing, signs, speech, demonstrations, local typing and exact adult scribing. Keep the science goal and the chosen route.

Record adult prompt level separately from the pupil work. Pupil mark box: I · S · C. Staff prompting record: level used, reason and fading step. Do not put staff prompting instructions on pupil sheets.

TA brief continued

Before: check research notes and source labels are ready. Offer a quiet paper route and one named audience. Check devices, sound and movement routines.

During: ask what the fact shows and where it came from. If recall is inaccessible, point to the supplied retrieval box and read it without supplying today's answer.

Audience: genuinely receive the pupil response. Say back the science heard or seen. If feedback confirms the work, receive a clear reason and a new-use step instead of forcing an unnecessary edit.

Next move: secure understanding transfers to a new use; mixed understanding gets a contrast; a misconception gets a counterexample and a fresh question. An access barrier changes the mode or adult role. A method barrier returns to the source or evidence record.

Feedback and evidence: use VF, WS, I, NS+, //, ?, R and E in the school's recorded sense. R requires pupil Voice, real Audience, one NS+ prompt and the pupil response in their own colour. Record evidence with SCI-GROW-A2-W03-P2.
