Teacher and cover plan

1. Outcome. I can explain how an action reduces climate impact, distinguish reducing causes from coping with effects, and plan evidence to check whether it worked. Weekly line C42: Describe causes and effects of global warming and how to reduce our impact.

2. Arrival. Use the recap and four selected-route checks. Do not assume prior attendance or completion.

3. Starter. Hold one first idea, then view all three source frames: problem, two kinds of action, measure. Predictions are not scored.

4. I do. Explain the three terms and all action-to-mechanism steps; retain the six-action sorter and same-instrument/time/repeat measurement clue. Where fossil fuels supply energy, lower demand can mean fewer emissions.

5. We do. Hinge first/repeat; model baseline/prediction/action/review. Sort all five Lab cards with feedback/retry and frozen-evidence limits. Glitch second/repair.

6. You do. Each learner chooses one approved paper scenario and route, plans evidence before success, and keeps an own response plus next-question/measure card.

7. Routes. Supported labelled Action/How/Measure cards and A/B; Independent full plan/prediction/control; Aspire mitigation/adaptation comparison and confounding/evidence limit. Alternatives, not fixed pupil labels.

8. Access. Point, say, sign, draw, write, exact scribe or adult-directed action. Allow a pass; no cold calling, personal or family data, or required live activity.

9. TA role. Alternate pair roles without merging evidence. Use the exact five-step ladder. Teacher genuinely receives each response and names back its science.

10. Exit. Use the source route question, own evidence, real Audience and named next move. Confidence or clicks are not achievement scores.

11. Evaluation. Record what each learner showed, support used, what changed after listening and the next teaching step.

Teacher and cover plan continued

12. Kit, safety, evidence and timing

Kit. Three approved paper scenarios, six-action cards, five Lab cards, invented five-day before/after strip, book/plan, organiser and pencils. Source three-frame animation has static frame alternatives.

Safety. No live site action is required. Pupils do not touch sockets, plugs, boilers, thermostats or controls. Never interrupt safety/access equipment. No family travel, food or energy data. Staff supply any real readings.

Evidence. Each learner keeps an action-to-mechanism chain, baseline, repeated measure, comparable condition and limit, own exit and next-question/measure card. Do not claim success before evidence.

Science. Invented before60,45,75,50,70=300; after15,20,10,25,20=90 empty-room light-on minutes. Same lamps/conditions are needed. The sample shows a local light-minute change, not measured energy/carbon or global climate success. Keep where-fossil-fuels/can qualifications.

0–3 min Arrival; 3–6 min Starter; 6–10 min I do; 10–14 min We do; 14–17 min I do2; 17–21 min We do2; 21–33 min Independent; 33–36 min Review and handoff; 36–40 min Exit. Total40. Review3 is partitioned from source Independent15; no extra time.

Pair. Switch chooser/questioner, then speaker/listener. Hear each own response and real next move. Keep pupil meaning exact; no compulsory public speaking.
