Knowledge organiser

I can choose a model that fits my question.

I can give a clue that supports my answer.

I can name one next step after feedback.

I am learning to… use a model and a matching clue to show what you know in science.

Three ideas: toy on two surfaces, day and night, and a long climate pattern. Sketches are simplified; the line is not data.

I can choose a model that fits my question. I can give a clue that supports my answer. I can name one next step after feedback.

Word page

I can choose a model that fits my question.

I can give a clue that supports my answer.

I can name one next step after feedback.

Word	It means	Example
evidence	a result or observation that supports a claim	A measured distance is evidence about a toy run.
force	a push or pull on an object	Friction is a contact force.
rotation	a turn around an axis	Earth’s rotation makes day and night.
climate	weather patterns over many years	Climate is not the weather on one day.

Choose a model that fits your question. Use a real clue. Keep one fair limit.

Arrival and starter

I can choose a model that fits my question.

I can give a clue that supports my answer.

I can name one next step after feedback.

Choose a model used this term. Point to one question it could help answer.

Think back. Say, point or write one answer for each question.

1. What changed in last week’s fair test?
2. What model can help with a toy motion question?
3. Name one force you learned in Autumn 1.

You may point, sign, say or write your first ideas.

I do · model and check

I can choose a model that fits my question.

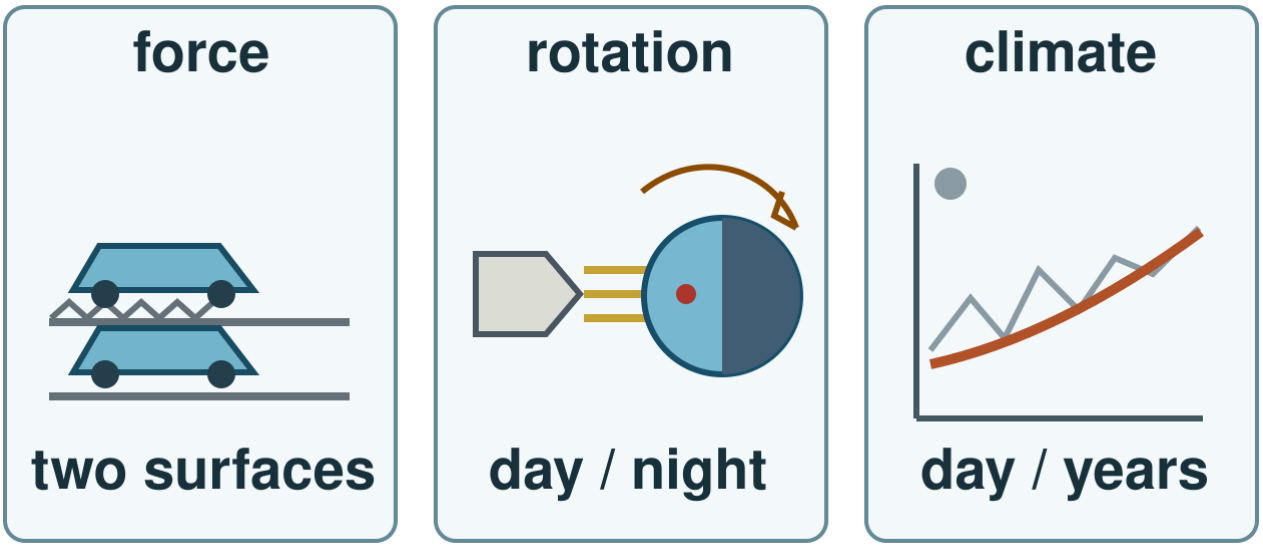

I can give a clue that supports my answer.

I can name one next step after feedback.

I choose a question, then a matching model and clue. For day and night, the torch lights one side of a turning ball. I explain the place turning into shade. This is practice, not help during formal evidence.

Watch: Question: why does a place get night? → choose torch and turning ball → marked place turns away from light → explain Earth's rotation.

Show me: Show me the model you would use for day and night.

Three ideas: toy on two surfaces, day and night, and a long climate pattern. Sketches are simplified; the line is not data.

We do · sort and explain

I can choose a model that fits my question.

I can give a clue that supports my answer.

I can name one next step after feedback.

In practice, the question and torch-and-ball model are supplied. Complete the missing clue: what happens to the marked place as the ball turns?

Our turn: Question: what slowed the toy? → choose toy and surface → observe ____ → explain a possible force; check with repeat runs.

Talk, then sort.

Card	Choose a group
Question about friction	toy and surface / torch and ball / long-term cards
Question about day and night	toy and surface / torch and ball / long-term cards
Question about climate	toy and surface / torch and ball / long-term cards

Supported: Point to the torch and the marked place before naming the clue.

Independent: Use a model and matching clue to explain a science idea.

Aspire: Explain why a correct model can still leave out size, distance or other details.

We do 2 · choose and explain

I can choose a model that fits my question.

I can give a clue that supports my answer.

I can name one next step after feedback.

Which clue fits a day-and-night claim?

A. A marked place turns away from torch light

B. A toy travels farther

All of us: A new question asks why a model sled stops sooner on a mat. Which kit can help test it?

A. Sled and two marked surfaces.

B. A torch and turning globe.

C. Two ice cubes on dark card.

D. A weather report from today.

Show your choice and say why. You may use a point, card, board or sign. Take one quiet minute to reset.

Independent · Supported

I can choose a model that fits my question.

I can give a clue that supports my answer.

I can name one next step after feedback.

Choose two science questions from forces, space or climate. Show an answer with a model and a matching clue. Use only your agreed support if this is formal evidence.

Talk first. You can plan in any language.

Point, sign, speak, draw, type, write, use a scribe or show a staff-captured photo.

Match one question to its model.

Say first: For ___, I choose ___.

My question and answer	Model and clue
_____	_____
_____	_____

Choose one route within the full 8 minutes. Keep your own response.

Independent · Aspire

I can choose a model that fits my question.

I can give a clue that supports my answer.

I can name one next step after feedback.

Choose two science questions from forces, space or climate. Show an answer with a model and a matching clue. Use only your agreed support if this is formal evidence.

Talk first. You can plan in any language.

Point, sign, speak, draw, type, write, use a scribe or show a staff-captured photo.

State one limit of a model and suggest a further check.

Say first: The model suggests ___, but I would check ___ because ___.

Go deeper: For one claim, give two checks and one model limit. Say which extra observation you would seek.

Two ways to check: Compare two model limits. Choose a claim neither can settle alone and name a new observation that would help.

My question and answer	Model and clue
_____	_____
_____	_____

Choose one route within the full 8 minutes. Keep your own response.

Practical model · safe steps and record

I can choose a model that fits my question.

I can give a clue that supports my answer.

I can name one next step after feedback.

Kit: Adult-prepared familiar model kit for the selected question

Use only the prepared model selected for the agreed practice or formal task.

Risk: Loose model parts, a toy launch or a torch beam could cause harm if misused.

Safe: Keep model parts on the tray, launch only with adult permission and aim a torch away from eyes.

Use the kit your teacher has checked. A picture or adult-led model is a valid route.

My own evidence and next step

I can choose a model that fits my question.

I can give a clue that supports my answer.

I can name one next step after feedback.

My name _____ Date _____

My claim: _____

My real model, work, page or date: _____

My clue and what it shows: _____

What I cannot show yet: _____

The adult’s response: _____

My change, or why I kept it: _____

Next check: _____

Review and exit

I can choose a model that fits my question.

I can give a clue that supports my answer.

I can name one next step after feedback.

In practice, hear one comment on claim and clue. Self-edit one mismatch. If this is formal evidence, receive and act on feedback after collection under the agreed conditions.

VF: hear one comment. NS(+): name a next step. //: edit one part. ?: ask for a read-back. Take one quiet minute.

Tell the adult what you learned, which clue you used, your feedback and one next step. They use your answer to plan the next model or support.

? Read it back: use a model and a matching clue to show what you know in science.

My feedback was… say what changed. Next I need to… name a fix.

How I know: I can choose a model that fits my question. I can give a clue that supports my answer. I can name one next step after feedback.

The adult hears you and chooses our next example. Take one quiet minute.
