Staff answers and practical decisions

Design and Technology LAUNCH Spring 1 Week 2 Thursday 14 January 2027 P1 Year A

The model sequence

Prepare, mix, assemble. Model quantities are one wholemeal wrap, 80 g drained cooked ready-to-eat beans, 60 g carrot, 40 g cabbage, 60 g yoghurt and a small apple. Split the yoghurt into about 20 g in the filling and 40 g alongside. Follow the pupil’s actual checked plan.

Ingredient and tool check

Only cooked beans labelled ready to eat are suitable for this cold method. Adult opens tins and removes sharp lids. Adult demonstrates and supervises knife or grater use, or supplies prepared vegetables. The pupil can direct adult handling. Record the exact role.

Hinge

Correct: stop for the adult’s label check. A changed pot must be checked against individual records and actual labels before use. Reteach and recheck before handling resumes. Familiarity, a peer’s advice or a quiz answer is not clearance.

Parallel hinge

A utensil touches an unapproved food. Stop, isolate it and get a clean approved utensil after the adult checks the situation. Do not wipe it and continue using it without the required cleaning and allergy controls.

Before issuing food

Before ingredients are issued, use the school allergy policy and individual healthcare/access records, complete the blank teacher note privately, check every actual label and substitution, and confirm trained supervision, emergency arrangements, handwashing, safe tools, clean preparation and chilled storage. Unknown or incomplete checks mean HOLD. Do not infer no allergies from a blank record.

Storage after making

Keep chilled food at 0–5°C and out for the shortest practical time. Follow the earliest relevant use-by and storage instructions. Plan same-day eating. Agree safe chilled transport before food is taken home. Refrigerate leftovers promptly; use within 48 hours or freeze if suitable, following labels. An adult decides storage or disposal. Never refrigerate beans in their opened tin.

Staff misconceptions and evidence

Design and Technology LAUNCH Spring 1 Week 2 Thursday 14 January 2027 P1 Year A

A familiar ingredient is automatically safe.

Every actual label and substitution must be checked against current individual records before use.

A cold dish needs no food safety checks.

Handwashing, clean preparation, approved ingredients and chilling still apply.

A plate photo proves safe preparation.

It shows the food. Adult observations record the actual process and support.

A simulation is the same as a practical.

Label rehearsal as simulation and keep preparation competence pending.

Cold call with choice of response

Foundation: Which picture comes first? Expected: prepare after the adult's checks and GO.

Middle: Why stop for a replacement yoghurt? Expected: its actual label and suitability have not yet been checked.

Higher: What does a plate photo leave unproven? Expected: preparation sequence, hygiene, tool skill and the support used.

An honest finished record

Example only: I mashed the beans and filled the wrap. An adult prepared the vegetables. I washed and dried my hands and used a clean fork. The adult agreed chilled storage. Use actual pupil wording; do not copy this as an observation.

Illness and local restrictions

Staff check current school health and outbreak restrictions before food handling. Follow the school's exclusion and restart arrangements. People with vomiting or diarrhoea remain away until two days after symptoms stop. An outbreak may prevent the practical. Use simulation when handling is not cleared. Keep personal information private.
