Staff answers and decision checks

Design and Technology LAUNCH Spring 1 Week 4 Thursday 28 January 2027 P1 Year A

Purpose and size

Three cards are each 60 mm by 80 mm. The default uses two pieces 100 mm by 120 mm. Seam lines are 10 mm inside left, right and bottom; top is open. The approximate space between side seam lines is 80 mm wide, so a 60 mm card has room. Actual thickness and joins can change the fit; test the made item later.

Fabric choice

Accept a purpose-linked choice supported by a real sample result or an honest model label. In the model, felt is firm and has a non-fraying edge; actual samples vary. Cotton may need edge finishing and support. Knit stretch may make measuring and shaping harder. Do not make universal claims about all fabrics.

Joining choice

Hand running stitch joins layers under adult control. Adhesive needs actual label approval and full cure. A button and loop or ties close an opening; they do not replace joining sides and bottom. Our design needs no fastening.

Hinge and parallel check

Hinge: No, a button does not join both sides and bottom. Re-point to the three joined edges. Parallel: a join that feels dry still cannot be tested before the label’s full cure is complete. Reteach and ask the pupil to explain before independent work.

Valid own words

Adult example only: I choose the felt model because its firmness may support the cards. I choose hand stitch for the three joins. I still need to test my actual fabric. Do not copy this as a pupil result.

Staff misconceptions and questions

Design and Technology LAUNCH Spring 1 Week 4 Thursday 28 January 2027 P1 Year A

A picture proves sample properties

A photo shows appearance. Stretch, fray and firmness claims need actual sample checks or a clear model information label.

Decoration is the only purpose

Colour or appearance can be a choice, but the brief requires card fit, secure sides and bottom, an open top and comfortable handling.

Every adhesive has the same cure time

Use only the actual label and adult approval. A dry surface is not proof of full cure. No invented time, heat or solvent method.

A template image controls size

Written ruler measurements control. These pictures are not cutting templates. Two pieces are each 100 mm wide by 120 mm high.

Cold call with response choice

Foundation: Which edge stays open? Expected: top.

Middle: Why could firm felt help? Expected: it may support the cards; check the actual sample.

Higher: What does model information leave unproven? Expected: properties of the actual sample and performance of the made pouch.

Evidence and support

Record choosing today, not sewing. A pupil may direct adult handling and confirm scribed words. Mark missing tests, unfinished decisions and future tool approval honestly.
