Staff answers and assessment decisions

Design and Technology LAUNCH Spring 1 Week 6 Thursday 11 February 2027 P1 Year A

Purpose and safe checks

The model pouch holds three paper cards, each 60 mm by 80 mm, upright. It has joined sides and bottom, no loose sharp parts and comfortable handling. The top stays open. Use the actual approved design and record any change.

Prediction or result

I think the cards will fit is a prediction. I put three cards in and they fitted describes a result only if that actual test occurred. A pupil may report a failed or unfinished test honestly.

Hinge answer

Stop for adult removal and count of the needle. Do not test or hide a sharp part. Reteach before a pupil resumes testing if needed. The adult still checks the actual item.

Parallel hinge

An uncured bonded seam is not ready for testing. Wait for the full labelled cure and adult clearance. Do not invent a cure time or record a predicted strength as a result.

A model evaluation

Invented adult example only: The three cards fitted without force. During a gentle upright lift, one gap opened at the lower join. The item partly met the purpose. I would close that gap and repeat the same safe check. Do not copy this as a pupil result.

Finishing and support

Accept exact confirmed scribing, signing or pupil-directed adult handling as participation. Record the pupil and adult actions separately. Do not claim an independent stitch if the adult made it.

Staff misconceptions and evidence

Design and Technology LAUNCH Spring 1 Week 6 Thursday 11 February 2027 P1 Year A

A neat item must meet its purpose.

Appearance is one feature. The actual cards and joined edges need the agreed checks.

A prediction is a test result.

Record a prediction as a prediction. A result comes from an actual safe test.

A tick means the whole award is complete.

The grid records evidence for weekly outcomes. It is not an award decision.

The adult's finishing is my independent skill.

Keep pupil actions, directed adult handling and other support separate.

Cold call with a choice of response

Foundation: Point to the part that must stay open. Expected: the top.

Middle: Why do we use the actual cards? Expected: they test the stated purpose rather than a guess about size.

Higher: What does one gentle lift leave uncertain? Expected: longer-term durability and other loads or uses have not been tested.

Grid decision rule

Shown needs actual evidence and a short location/comment. More to do records partial evidence or an unfinished step. Not yet seen records no available evidence yet. These are weekly evidence statuses, not grades or qualification decisions.

Closing the strand

Retain the actual item, design, test record, pupil evaluation and six-outcome grid. Keep earlier food evidence in its true form; never infer taste from a photograph or invent missing preparation. Record a supported next opportunity where needed.
