

Control a character

I can use key events to move a sprite and fix a direction mistake.

Show what starts your saved Week 1 script.

Then load W02_Start.sb3.

You can point, say or write. Quiet working is available.

The direction mystery

A player presses left. The sprite goes right.

The key event runs, but the result is wrong.

What would you check first?

when left arrow key pressed

change x by 10

Left input moves Courier right.

A key starts an action

Right and left change x.

when right arrow key pressed

change x by 10

when left arrow key pressed

change x by -10

Green flag reset: $x = 0$, $y = 0$

The wrong sign

Choose a repair for the left script.

Point or say why it should work.

Reset. Test left, then right.

when left arrow key pressed

change x by 10

We choose a repair, then test it.

A test with a destination

Predict the finish from $x = 0$.

Right, right, left, left

Give each key input to a partner.

Start: $x = 0, y = 0$

Run the test. Did it match?

Finish: $x = ?$

Up and down use y

Up and down change y.

when up arrow key pressed

change y by 10

when down arrow key pressed

change y by -10

Positive y goes up in Scratch.

A short route

Choose a target with your teacher.

Start (0, 0)

Plan the key presses together.

Horizontal: (20, 0)

Test from the centre. Check the finish.

Next: beacon (20, 20)

Your task route

Step by step

Build one key script, test it, then build the next.

Main task

Build right and left. Test the return to zero.

Challenge

Add up and down. Find two routes to (20, 20).

You can change route. Point, say or write on every route.

Your control scripts

Build right and left in
W02_Start.sb3.

Use your route sheet for the next
step.

Reset before each test.

when right arrow key pressed

change x by your value

Create a separate left script.

Press and release each key.

Your mission and its effect

Show a test of your controls.

Choose a mission from your sheet.

Suggest one feature you would like.

What I said, and what it changed

Your teacher will listen and reply.

Save your controls

Save your Scratch controls file.

Load it and test one direction.

Point or say what that block does.

Your Scratch file: W02_MyControls.sb3
