Evaluate our food design

Weekly outcome: FOODWISE: evaluate taste, cost and nutrition.

I can use real evidence to review my dish, check its cost and choose one improvement.

Today I can

I can separate a taste note from an appearance note.

I can check cost per portion and describe the food groups.

I can give one improvement with a reason linked to my evidence.

Key points

Use actual Week 1 and Week 2 records. A photo supports appearance, not taste. Taste not tried and recorded means taste not assessed.

Add ingredient-use costs for the actual amount made. Divide a whole batch cost by its actual number of portions. An already per-portion price is not divided again.

Balance is built across the day or week. Each meal does not need exact plate sections. Use the actual dish and amounts in your review. These example portions do not meet every person’s needs. Choose water as a drink. No calorie counting, body or weight discussion is needed.

In your book. You may speak, sign, draw or direct an adult to record your confirmed words. Plan in any language.

Sensory evidence card

LAUNCH Design and Technology Spring 1 Week 3 Thursday 21 January 2027 P1 Year A Resilience and Change

Use the source before making a claim. These are adult examples, not pupil findings.

Source available	What you may record
Actual Week 2 taste note with date	Use the recorded flavour words and name the source.
Actual checked food-only photo	Describe appearance, such as colour, fold or shape.
Taste was not tried and recorded	Write taste not assessed. Review other headings.
Record missing or making not completed	Name the gap. Keep the actual dish review pending.

Sort the adult examples

A The photo shows a folded wrap. B The recorded note says mild flavour. C There is no taste note.

Decide appearance, taste, or taste not assessed. Keep each claim with its source.

No food is needed today. Do not bring or taste the Week 2 food a week later. Use the actual Week 2 notes or a checked food-only photo. If taste was not tried and recorded, write taste not assessed. A photo cannot prove taste. Any fresh tasting would be a separate, newly cleared food activity and is not required here.

Cost per portion

LAUNCH Design and Technology Spring 1 Week 3 Thursday 21 January 2027 P1 Year A Resilience and Change

Week 1 model prices are invented for the stated amounts used by one person. They are not whole-pack shopping prices. The 60 g yoghurt is counted once, split as about 20 g in the filling and 40 g alongside. Use the pupil's actual approved ingredient amounts and substitutions. Unknown costs stay unknown.

Ingredient	Model amount for one person	Invented cost
Wholemeal wrap	1 wrap	35p
Ready-to-eat cooked beans	80 g drained	30p
Carrot	60 g	15p
Cabbage	40 g	10p
Plain yoghurt	60 g	20p
Apple	1 small	30p
Total for one portion		140p or £1.40

From a £2.00 budget, the one-portion model leaves 60p.

Batch and portion

A two-portion batch at 280p costs 280p divided by 2 = 140p per portion. Do not divide a one-portion price again.

Replacing the 30p apple with a 35p pear gives 140p - 30p + 35p = 145p or £1.45. This leaves 55p.

In your book, use your actual listed amounts, known ingredient-use prices and actual portion count. Mark an unknown amount or price clearly.

Review the food groups

LAUNCH Design and Technology Spring 1 Week 3 Thursday 21 January 2027 P1 Year A Resilience and Change

Use this adult model to help review your actual dish.

Food group	Model ingredient	What to consider
Starchy food	Wholemeal wrap	A wholegrain choice adds fibre.
Protein food	Cooked ready-to-eat beans	Beans provide protein and fibre.
Vegetables and fruit	Carrot, cabbage and apple	Variety contributes to a balanced eating pattern.
Dairy or suitable alternative	Plain yoghurt	Dairy provides calcium; a suitable alternative needs label and dietary checks.
Small amounts of oils and spreads	No added oil in this cold model	Do not add oil just to fill a box.

Balance is built across the day or week. Each meal does not need exact plate sections. Use the actual dish and amounts in your review. These example portions do not meet every person’s needs. Choose water as a drink. No calorie counting, body or weight discussion is needed.

Your dish

Name the food groups present in your actual ingredients. Explain one strength or a useful change in variety. Check a proposed substitution before future food use. Do not claim that a picture proves amounts or individual nutritional needs.

My food evaluation prompts

LAUNCH Design and Technology Spring 1 Week 3 Thursday 21 January 2027 P1 Year A Resilience and Change

Respond in your book or existing evidence record. Use your own words and the actual source. An adult can scribe and read your words back.

1 Dish and evidence

Name your actual dish or the true making stage. Give the dates and locations of your Week 1 plan and Week 2 notes or photo. Mark missing items.

2 Taste and appearance

Taste note present: use its exact meaning and source. Taste not tried and recorded: write taste not assessed. Describe appearance only if it is evidenced.

3 Cost

List actual amounts and ingredient-use prices. State whether the cost is already for one portion or for a batch. Show your calculation and check money left if using the £2.00 budget.

4 Nutrition

Name the food groups in your actual meal. Give one comment about variety or balance over time.

5 One improvement

Name one real strength or limit. Suggest one future change, why it might help and how you would check it.

6 Ownership

Give the date, evidence page or record location and actual support. Read or hear the review back and correct it if needed.

No food or tasting is needed today. Missing evidence stays pending. A model is practice, not your actual result.

One improvement with a reason

LAUNCH Design and Technology Spring 1 Week 3 Thursday 21 January 2027 P1 Year A Resilience and Change

Use an actual finding or a named limit in your evidence. Choose one change that can be checked next time.

A useful review pattern

My evidence says or shows ___. I would change ___. This might help because ___. Next time I would check ___.

Adult model about evidence

I have the ingredient plan but no recorded taste note. Taste is not assessed. Next time I would record an optional taste comment on the making day, or record that tasting was declined. This would keep the next review accurate. No tasting is required.

Adult model about cost

The pear version costs £1.45 rather than £1.40. It still fits the £2.00 budget. If fruit choice was the aim, I would choose the version that fits the person’s checked needs and preference. The extra 5p is a cost trade-off, not proof of better taste.

Your choice

Give your own improvement and reason. Keep an expected effect separate from a tested result. A future food change needs an adult check before use.
