Sequence and evidence guide

Design and Technology LAUNCH Spring 1 Week 5 Thursday 4 February 2027 P1 Year A

Design and Technology LAUNCH Spring 1 Week 5. Use the dated teacher and cover plan and the actual Week 4 design first. School and Public contain the same generic resources.

Design make evaluate

Weeks 1–3 completed the food design cycle. Week 4 chose fabric and technique for the small card pouch. Week 5 measures, cuts and joins. Week 6 finishes and evaluates the actual product. Only Week 5 is included here.

The purpose and default plan

Make a small reusable pouch to hold three paper prompt cards, each 60 mm by 80 mm. Leave the top open. Join the sides and bottom. It should hold the cards upright, have no loose sharp parts and be comfortable to handle.

Default plan: two pieces, each 100 mm wide by 120 mm high. This is 10 cm by 12 cm. Mark a seam line 10 mm inside the left, right and bottom edges. Keep the top open. Use the pupil’s actual approved Week 4 design if it differs.

Evidence to retain

Keep actual work, design reference, measurements and units, pupil actions, adult actions, join stage, correction, tool return and next step. A target copied from a card is not an actual measurement.

Book first and tiers

Pupil pages prompt work in the book. Choose Supported, Standard or Stretch. Type instead begins closed. Save my responses creates a local text record. Rehearse in any language. Keep actual support visible.

Where this leads

Textile makers use measurements, safe tools and repeat checks to turn a design into a useful item. Accurate records help another person understand a change.

Practical boundaries and future use

Design and Technology LAUNCH Spring 1 Week 5 Thursday 4 February 2027 P1 Year A

No safe textile equipment

With no fabric or safe tools, use a paper model or empty-hand rehearsal. Mark imagined measurements, explain the cut line and trace the running stitch route. Record this as planning or simulation. Keep textile measuring, cutting and joining evidence pending until those actions happen on actual fabric with approved tools.

A missing design

Agree a new design today using the common purpose brief and default method if suitable. Record that decision as new. Do not invent a Week 4 choice. The adult checks fabric, method, tools and support before making.

If bonding was selected

Use an adhesive route only if it is in the actual approved design and the adult has checked the fabric, product label, ventilation and access needs. Follow that label for application and full cure time. Do not invent a curing time or test an uncured join. No heat or solvents are used. Keep joining or testing pending where needed.

Working safely

Count needles before and after and keep them in a container. Never place needles or pins in the mouth or leave them in the pouch. Stop and tell the adult if a needle is missing. Use the agreed supervised cutting and sewing methods. A pause begins with tools down and work safe.

Accuracy and evidence

Default cut checks allow 2 mm either side of 100 mm and 120 mm. A 10 mm seam guide uses an 8 to 12 mm check range. These help improve work, not grade pupils. A revised design uses its recorded targets. Do not claim practical textile skills from a paper model.

Preparation for Week 6

Keep the item and actual record together. Week 6 checks whether three 60 mm by 80 mm cards fit upright, joined edges hold and handling is comfortable. Test an adhesive join only after its full cure.
