Staff answers and observation

Follow a two-step recipe

These are teaching guides, not prefilled learner evidence. Use a separate adult model. Record actual responses, actions and support.

Model and task key

The adult has checked my food and kit. My hands and work space are clean. I read step 1 and find pot 1. I put the fruit into the bowl. I add pot 2 and stir gently for step 2. I check both steps and ask for help if needed.

Part	Teaching guide
Set-up	Staff prepare each learner’s two pots. For this small teaching sample, pot 1 can hold two teaspoons of ready-prepared soft fruit and pot 2 two teaspoons of plain yoghurt. These are task quantities, not dietary portion advice. Adjust texture, ingredient and amount to the checked individual plan.
Step 1	Put the fruit from pot 1 into the bowl. Observe the learner moving the fruit, with support recorded.
Step 2	Add the yoghurt from pot 2. Stir gently. Record adding and stirring; if only one action is seen, retain the other as a gap.
Sequence	Recipe step 1 precedes recipe step 2. Hygiene, set-up and clearing away are surrounding routines; the recipe still has two numbered steps.
Support	The objective explicitly permits support. Record the level and type; do not label an adult-completed action as the learner’s performance.

Hinge and reteach

On the separate adult set, show fruit in the bowl and pot 2 still full. Ask: “Do step 1 again, or use pot 2 for step 2?” Expected: add pot 2 and stir gently. If unsure, point to the step number, ask a short question, rephrase, offer a choice, then model only the first needed action. Recheck on the adult set and record support during the learner’s own turn.

Common errors

Two pots do not mean two portions to eat: they are ingredients for a small task. Numbered cards support sequence; reading the card is not evidence that the action was completed. A finished bowl made by an adult is not the learner’s performance. Dry rehearsal is recorded separately.

Teaching protocol and evidence

Before and during the lesson

Print the two Evidence Sheet and two Support Cards pages and a Vocabulary Mat. Prepare a separate adult model and one checked set per learner: stable tray, unbreakable bowl, spoon and two numbered pots. Pot 1 holds a small amount of ready-prepared soft fruit; pot 2 holds plain yoghurt. Staff choose portions, texture and any safe substitute in advance. Arrange handwashing, chilled storage and supervised turns.

Before bringing food into the room, staff check individual allergy, dietary, texture and swallowing needs privately, ingredient labels, use-by dates, storage and cross-contact controls. Plain yoghurt contains milk; alternatives also need checking. Staff wash and prepare fruit, portion ingredients, clean equipment and arrange a safe work surface. Keep chilled food refrigerated until use and follow storage instructions. No heat, blades, glass or raw animal foods. Learners use only their own checked pots and kit; no sharing or tasting is required. Staff manage spills, products, food storage or disposal and the setting's emergency procedures. If food work cannot be made safe, use a dry rehearsal and record practical work as not yet observed.

Staff retain ingredient information privately and confirm the setting's allergy and emergency arrangements. Do not assume a substitute is safe because of a general food label. Avoid cross-contact through hands, shared spoons, containers or surfaces. No toppings or extra ingredients are added. Learners need not disclose health details to the group.

Adult-approved substitutions retain the same two actions: transfer a prepared ingredient, then add the second and stir. Record the actual foods and altered wording; a completed adapted recipe is evidence of that stated task. If safe food work is unavailable, use cards and empty pots, mark it as rehearsal and arrange a later practical opportunity.

Use Support Cards page 1. A small group can have one supervised turn of about three minutes per learner; prepare extra supervised stations or record unfinished turns if more time is needed. Read and point as needed. Capture actual learner action, sequence and exact support during the task; an adult doing a step is not the learner doing it.

Evidence decisions

A dated individual observation of the two recipe steps, their order, actual support and any unfinished action; the learner gives a check or help request and a next step.

Record observed with stated help, partial or not yet observed. Record any recipe action not completed as a gap. Keep first work, prompts and later responses separate. No total score or qualification result is inferred.

Feedback and next step

Use VF · WS · I · NS+ (Yellow Box) · // self-edit · ? read back · R responded · E evidence. R requires Voice, Audience, a specific NS+ prompt and the learner response in their own colour. E is used only when actual work is banked. Keep the first try and any later change separate.

Theme: Identity & Belonging. This helps me follow a task in order and ask for help.

Weeks 1–6 are formative. Week 7 gathers and reviews the half-term evidence.
