Explain settlement and urbanisation.

A local settlement can grow as jobs, transport or services attract people. National urbanisation measures a rising urban population share. Compare like with like.

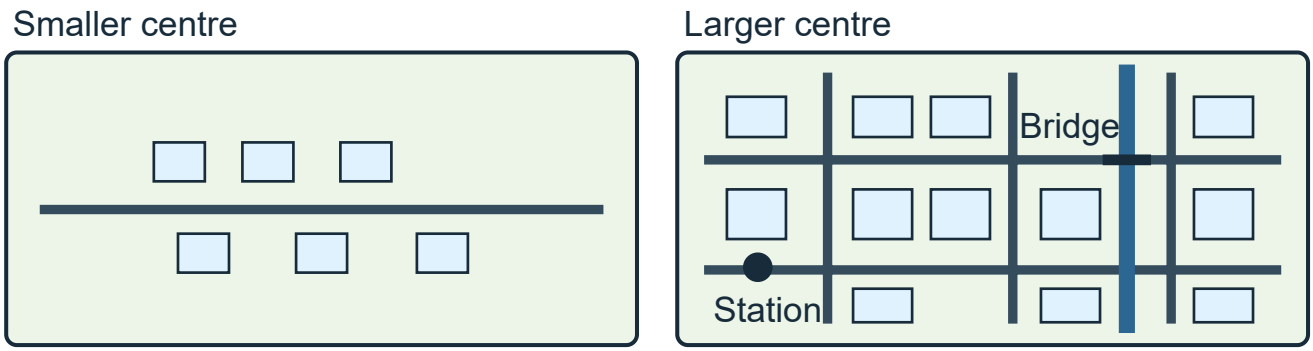

Tier	Word	Meaning
Tier 3	settlement	A place where people live.
Tier 3	urbanisation	An increase in the share of people living in urban places.
Tier 2	land use	What land is used for.
Tier 3	GIS	A way to map information in separate data layers.

A place may grow because ____. This can lead to ____. Urbanisation specifically means ____.

Compare settlement patterns

Two schematic views at the same scale. The smaller centre has a few buildings along one road and open land. The larger centre has more streets and buildings, a station and a bridge.

The drawings show two fictional centres at the same scale. Use them to compare patterns and locate reference points. Use the tally separately as practice data.

Made by Matt

Evidence cards A and B

A · Local reference points

A railway station and bridge mark two reference points in the larger centre. A civic building is outside the map to the south. Layers can separate routes, buildings and reference points.

Reference points alone give neither population density nor a cause of growth.

B · Reasons places grow

Work, transport and services can attract residents and businesses. Growing settlements may need more homes and infrastructure. Population can also rise within a settlement’s existing boundary.

Treat each explanation as a hypothesis until you have local evidence.

Made by Matt

Evidence cards C and D

C · Practice land-use tally

Fictional sample: shops 8, homes 12, public services 4, green spaces 6. Use the tally to practise interpreting what a small area contains. Use your own labelled observations for fieldwork.

The sample describes 30 recorded uses. It gives neither a population count nor a national trend.

D · Contrast at the same scale

Compare a small centre and a larger centre at the same map scale. Record the area, source and observation round for each sample.

One sampled street does not represent a whole settlement.

Shared investigation

Sort each claim as a land-use observation, a possible growth explanation or urbanisation. Use card C to say what the sample actually measures.

1. Sort: a street has eight shops.
2. Sort: more jobs attract residents.
3. Sort: the share living in urban areas rises.

Practice land use	Count
Shops	8
Homes	12
Public services	4
Green spaces	6

Our explanation

Optional · respond to feedback together

Optional: show an adult one link between a cause and a possible change. Listen to one piece of feedback. Reply by revising the link, justifying it or asking for help.

My response or improvement

Made by Matt

We do decision checkpoint

A group counted eight shops on one street. Which claim can their tally support?

1. The sample has eight shops
2. The national urban share has risen
3. Jobs caused the settlement to grow

My claim and clue

Made by Matt

Worked model

Identify the claim

More buildings prove national urbanisation. They show building growth in the mapped area.

Link a possible cause

Jobs may attract people and increase demand for homes. Better links or services may attract residents and businesses.

Check the measure

A rising share of people living in urban places. Yes. Population can grow in rural and urban places at the same time.

Ask for evidence

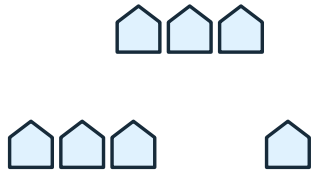

Urban and total population counts for two comparable observations. Use the same boundary and definition of urban. Compare the share, as well as the raw counts.

Humanities · LAUNCH · Autumn 2 · Week 3 · HUM-LAUNCH-A2-W03

Arrival · Independent

1. Point to the picture that matches the top one.

2. What is a settlement?

3. Why do more buildings alone fail to prove national urbanisation?

4. What evidence would you compare?

You do · Independent

Staff mark I · S · C beside the task.

1. Explain how work, transport and services can lead to settlement growth.
2. Use the diagram and the practice tally to support one part of your explanation.
3. Distinguish local growth from a rising national urban population share.

Word bank: settlement · land use · infrastructure · urban population share.

My example and card detail
