Care ethics and choices

Investigate ethics of how we treat others and the planet.

Resilience & Change

An ethical question

Ethics asks how we should act and why.

A choice may affect people and the planet.

Use the fictional problem. You may point, speak or pass.

Beliefs can guide a choice

Christian stewardship can guide care for the world.

Sikh seva can guide service to others.

Humanists may use reason and care to reduce harm.

An invented display

A club has twenty clean sheets. It needs fifteen.

Four sheets have writing on one side.

Compare buying, reusing or cancelling.

Who and what is affected

A plan should reduce waste and include everyone.

The club checks for safe, clear and suitable sheets.

Some learners may need a different format.

Investigate effects. Do not rank people's beliefs.

Options effects and reasons

Option	People	Resources	Question
A Buy new	New paper	Old sheets wasted	Are old sheets usable?
B Reuse	Check access	Less waste	What format is needed?
C Cancel	No one takes part	No new sheets	Is there a better plan?

Choose a plan and explain the effects. Ask for missing facts.

Our talk

I would choose ____ because ____.

This affects people by ____.

It affects the planet by ____.

A belief or worldview may support the reason.

Your response

Supported: choose an option, effects and a reason.

Independent: compare two options and justify.

Aspire: compare all three and give a condition.

Link your reasons with a named worldview.

Review and exit

Name one effect on people and one on the planet.

What fact would help you decide?

Give a reason. You do not need to state a personal belief.
