References evidence and rights at work

Thread tags: moral and social development; mutual respect and rule of law.

Exact scheme outcomes

Gather references & evidence.

Rights-at-work outcome.

Source: LAUNCH Weekly Spring rows 98, 99. Exact wording supplied in the owner brief; the source workbook is not redistributed. Timing and teaching examples are authored adaptations.

Purpose

Bring your actual work from the first three lessons. Today you will choose evidence, plan how to request a reference and answer one final invented workplace scenario. Missing work stays marked as missing. You do not have to rewrite the half-term, share personal employment experiences or contact anyone in this lesson. This is the last taught lesson: the term ends on Thursday 25 March and there is no Friday lesson in Week 5.

Success checks

I can link an actual piece of my work to a claim and show a gap honestly.

I can identify a suitable referee role and explain why permission is needed.

I can use a workplace clue to choose and explain a safe next step.

Prepare

Prepare actual learner work from Weeks 1–3, if available; keep gaps visible. Use the closing Evidence Sheet, invented final scenario, route pack, vocabulary mat and support cards. Provide a book or usual response aid; optional calculator, number line, exact scribe and adult readback. No live payroll or employer data.

Forty minute sequence

Minutes	Phase	Teaching
0–5	Arrival and retrieval	Agree a response mode and recall one useful idea.
5–13	I do	Read the invented model; explain the key words; check understanding.
13–23	We do	Work as reader and checker, swap roles, then answer the hinge privately.
23–35	You do	Each learner gives their own response using a chosen route.
35–40	Review and exit	Review evidence, give one next step, keep the reply and save.

Processing time and brief pauses sit within these phases. Reduce repetition for access; do not add a timed speed test.

Teaching the ideas

Invented workplace

An invented, unnamed small workplace prepares paper packs. A supervisor gives instructions; a preparer and checker share the task. Use ready-cut paper only. All workplace stories, contract terms and payslips are invented teaching examples. They are not records of a learner’s employment.

I do model

INVENTED TEACHING EXAMPLE, NOT LEARNER EVIDENCE. An unnamed learner has one task sheet that shows a missing item was noticed before a paper pack was handed over. A claim that fits is: 'I checked this pack against the order.' A claim that goes beyond the sheet is: 'I always work perfectly.' The sheet shows one check, not every future action.

The model evidence record reads: 'Task sheet from a practice activity; one checked pack; adult prompted the first check; second pack not observed.' The honest next step is to try the same check again and record the support used. A model is never banked as a learner's completed work.

INVENTED MODEL REFERENCE. 'During one classroom practice activity, the learner checked one pack against an order after a prompt. I did not observe later work.' This is a model statement only. It is not a real reference, a staff judgement or proof of workplace attendance. A suitable referee must know the relevant work and agree before their details or statement are used.

For the closing scenario, a worker is asked to use an unfamiliar machine without training. A safe first step is to stop that task and ask the supervisor for training or a safe alternative. The worker can point to the task information and describe the concern calmly. If help is not available or the concern continues, use the agreed route to another trusted adult. Do not operate the machine to prove confidence.

Check after I do

Does one sheet showing one prompted check prove that a learner always works without help?

Key: No. It shows one check with a prompt. Keep the claim as small as the evidence and record the support.

We do in a pair

1. Agree roles: evidence finder and questioner. Use one real classroom item per learner. An adult can take the partner role if needed; private work can remain with the adult.

2. The finder points to one actual work reference and says: 'This shows ...' The questioner asks: 'Which part shows that? What is not shown yet?' Use the work, not a judgement about the person.

3. Swap roles. Each learner records their own claim, exact evidence clue, support used and one gap. If no item is available, record 'not available today' and agree a follow-up. Do not create a past event.

4. Together sort three reference choices: an adult who has observed the task and agrees to comment; an unknown person who has not seen the work; a copied model statement. Only the first is a possible real referee route. No name, contact detail or message is collected or sent.

5. Privately answer the hinge. If the evidence does not support the claim, narrow the claim or keep the gap visible. Do not tick a partner's achievement.

Decisions and individual work

Main hinge

Which entry is ready to keep as an honest evidence record?

A: I always work perfectly. I copied the model reference.

B: My task sheet shows one check after a prompt. The second pack was not observed.

C: I cannot find the work, so I will tick every outcome.

Key: B. Each learner answers privately. If either chooses A or C, model one claim against one actual clue, name the support and gap, then use the parallel hinge. If B is chosen and explained, move to the individual task. A correct letter without an evidence explanation needs a short follow-up.

Parallel hinge

A person has seen your task but has not agreed to be your referee. What can you record now?

A: A possible referee role and a plan to ask permission.

B: A completed reference written by me in that person's name.

C: Their contact details shared with everyone.

Key: A. If A is chosen with the permission explanation, continue with support as needed. Otherwise use the two-choice referee card and adult readback. Keep the reference status as 'permission not yet sought'; do not manufacture agreement.

You do

1. Make a short evidence record in your book or usual mode. Give the actual work reference, what it shows, the support used and one thing not shown. If it is missing, write that and one action to find or complete it later.

2. Choose a possible referee by role only, such as the adult who observed your classroom task. Write why that person could comment and what permission you would need before using details or a statement. You are planning a request, not sending one.

3. Read the final invented workroom scenario: the written task is to check paper packs. The worker is now told to use an unfamiliar machine without training. A practice payslip shows gross £1000, tax £100, NI £50 and printed net £900. These are invented figures for arithmetic, not real deduction rates.

4. Give a safe first action about the machine. Use one clue to explain your choice. Then calculate the correct net figure and say whom the worker could ask to check the mismatch. Do not change or sign a real document.

5. Finish with: 'The worker should ... because ... The record I would keep is ...' A brief spoken, pointed or exact-scribed response is valid. Check the response is your own, add one next step and respond to feedback.

Supported

Choose one actual item with an adult. Point to the part that supports your claim. Use: 'This shows ... I had help with ... Not shown yet ...' If there is no item, record that honestly. Pick a referee role from two choices: the adult who saw the task or a person who did not see it. Finish: 'I would ask permission before ...' Do not write names or contact details. For the final scenario, choose 'stop and ask for training' or 'try the machine first'. Explain with the clue 'no training'. Use a calculator, counters or a number line for £1000 minus £100 minus £50. Give the result and ask for the payslip to be checked.

Independent

Choose your own actual evidence item. Link a precise claim to it and identify support and a limit. Name a possible referee role, explain why the person could comment and state the permission step. Plan only; do not contact anyone. Answer the final scenario independently: safe action, evidence clue, correct net calculation, a calm query and a record to keep. Explain why each action helps.

Aspire

Compare two actual evidence items if available. Explain which better supports a particular claim and why. If only one is available, explain its limit without inventing a second. Explain how a useful reference differs from a broad claim such as 'always perfect'. Consider what the referee actually observed and whether permission has been obtained. For the final scenario, explain a second safe action if the first adult does not respond. Distinguish the calculation you can check from the legal or payroll questions that need an appropriate adult. Extra writing is optional.

Model fade

Model the first decision, share the next with the pair, then remove answer cues for a fresh individual response. Keep normal reading, communication and calculation aids. Note any prompt that supplies the thinking.

Access evidence and follow up

Area	Planned adaptation
Cognition and Learning	One step and one source at a time. Explicit model, small chunks, check-back, visible vocabulary and flexible pairs.
Communication and Interaction	Reader and checker roles; swap or let an adult take the other role. Rehearse a short frame; wait; accept exact scribe and readback.
SEMH	Predictable sequence, private check, choice of route and pass or pause with supported return. Keep scenarios fictional.
Sensory and Physical	Accessible seated work area, large print, usual aid, no fine-motor requirement or speed grade.
EAL	Plan in any language. Explain key words with the example; keep the concept demand while reducing reading load.

Prompt ladder

1 Point to the place or instruction. 2 Ask a short question. 3 Rephrase the instruction. 4 Provide a scaffold or choice. 5 Model the first step only, then return the task.

Speaking frames

Supported: I choose… because… Independent: The source says… so I would… Aspire: This evidence supports… but does not show…

Staff questions

Supported: Which line or clue helps? Independent: Why is that action useful? Aspire: What remains uncertain, and how could it be checked? Invite or pass; do not force a personal account.

TA focus

I do: point to the source and check key vocabulary. We do: protect equal turns and rehearse a question. Independent: record access and thinking prompts, then return ownership to the learner.

Evidence and feedback

Use the Evidence Sheet for actual work references and response mode. Keep the teacher grid separate from learner review; leave missing evidence visible. Codes: VF verbal feedback; WS worked with support; I independent; NS next step; // self-edit; ? read back; E saved evidence; R responded. Retain first try, one NS and learner reply. R requires Voice, Audience, NS and a learner response in the same colour, on the same page or usual mode. Offer to the Communication portfolio. Staff confirm any mapping to the unit award; no completion is implied.

Private help

Use voice, writing, pointing, a usual aid, typing or an exact scribe. Read back and correct. Plan in any language. Ask a trusted adult privately; pass, pause and return with support. No personal work or family story is needed. If a concern is shared, listen calmly, do not probe or promise secrecy, and use the usual safeguarding route. Keep private concerns out of shared lesson work.

Where this leads

This helps me read workplace information, make a safe choice and explain a useful next step.
