OPENING RESILIENCE & CHANGE

Design a useful card stand

I can plan a useful card stand, show three ideas and explain my choice.

Weekly outcome

CONSTRUCTION: design a product to solve a problem.

Keep the actual design record for Week 2.

ARRIVAL 5 MINUTES

A card that falls flat

Sam is an invented client.

One 80 mm wide by 60 mm high prompt card falls flat.

Design a small stand that keeps it upright and easy to read.

STARTER 3 MINUTES

What must the stand do

Design check	How we could check later
Card fit and view	Actual 80 by 60 mm card fits; message stays clear.
Stability	Stands on a level desk without a hand holding it.
Safe handling	Adult checks edges and joins before gentle handling.

A specification is a list of design checks.

I DO 5 MINUTES

Model one annotated idea

Sketch the base, support and card rest.

Label a part and say what it does.

A wide base may help it stand.

A U channel may catch the card edge.

WITHIN I DO DESIGN STARTING POINTS

Three ways to support a card

Folded triangle: a wide base and sloped support.

Slot base and backplate: support for the thin card.

Braced back: a back support with secure side braces.

These are ideas, not tested products.

WE DO 7 MINUTES

Compare different ways

What part supports the card?

What could help it stay upright?

What question needs checking later?

Use the same design checks for each idea.

WE DO 2 5 MINUTES

Does the reason solve the problem

The stand is blue, so it must hold the card upright.

Is that enough?

A Yes B No C Only if it looks neat

Explain which feature needs checking.

INDEPENDENT 8 MINUTES

Three ideas and my own choice

Write three clear design checks.

Make three quick different sketches.

Add two useful labels to each.

Choose one and give two reasons linked to your checks.

WITHIN INDEPENDENT ONE ROUTE AT A TIME

Supported Standard or Stretch

Supported: use shape prompts and confirm your own labels.

Standard: record the three ideas and a full choice with reasons.

Stretch: compare a rejected idea and explain a trade-off.

All routes keep three distinct ideas.

REVIEW 4 MINUTES

Check against the brief

Does the choice support the card and stand on its own?

Is the message clear? Are the planned edges safe?

Improve one label or reason.

Keep the real page, support and next question.

WITHIN REVIEW EVIDENCE AND SAFETY

Planning evidence and safe choices

A sketch predicts; it does not prove a product passed a test.

No cutting, hot glue or powered equipment is needed today.

Only agreed hand tools later, with adult approval and support.

No materials: describe three distinct ideas and confirm your record.

EXIT 3 MINUTES

A reason for the next maker

My chosen idea is ___.

It could help Sam because ___.

Next week I need to check ___.
