Sequence and evidence guide

Design and Technology LAUNCH Spring 2 Week 1 Thursday 25 February 2027 P1 Year A

Design and Technology LAUNCH Spring 2 Week 1. Use the dated cover plan, invented client brief and actual pupil book. School and Public contain the same generic teaching resources.

Design make evaluate

The first three weeks of the construction block begin with a problem, specification and three ideas. Week 2 selects materials, plans measurements and makes a card mock-up. Week 3 makes, adjusts and improves. This bundle contains only Week 1. Keep the actual design record for the next lessons.

One shared purpose

Invented client Sam uses one paper prompt card at a desk. The card is 80 mm wide and 60 mm high. It falls flat, so Sam cannot read it while working. Design a small tabletop stand to keep the card upright and easy to read. It must hold the card for 30 seconds with hands away on a level table. Keep the message clear and let the card be removed by hand. The whole stand, including its channel, must fit a 160 mm wide by 120 mm deep table area. It must have safe edges and no loose sharp parts.

Evidence this week

Keep the pupil's actual specification, three distinct quick annotated ideas, final choice with reasons and a real change or question. Add date, support and book location. Adult models stay labelled. Physical sketches or records not made stay pending.

Resources and access

Choose Supported, Standard or Stretch. Use individual cards or the combined pupil pack. Type instead starts closed; Save my responses creates a local text file. Nothing is uploaded. Plan in any language.

Safe planning and later continuity

Design and Technology LAUNCH Spring 2 Week 1 Thursday 25 February 2027 P1 Year A

Hand tools only

Today requires no tools. The default later method uses suitable thin plain card, approved scissors, finger folds and cold paper tape. Hot glue is comparison only in Week 2 and is not used. Power tools are excluded. Any changed design needs adult review of its material, tool method and support before making.

Default design model

One 80 by 60 mm card sits against a folded triangular stand with a shallow U retaining channel. The triangular body base is 120 by 80 mm. Allow 160 by 120 mm for the whole stand including the projecting channel. The later 30-second hands-away check uses a level table and one actual card; no pushing, shaking, drop test or heavy load. Do not call a prediction a passed test.

If materials are missing

With no card, paper, ruler, printer or tools, hear the brief and picture three different stand shapes. Describe each one and two useful labels, by speech or signing. Choose one with a reason linked to Sam's problem. An adult records exact confirmed words when a recording method is available; mark transcription pending until it exists. Keep physical sketches, measuring, making and product tests pending where not done.

Keep pupil ownership

A pupil may direct an adult sketch or scribe and confirm the record. Record the actual help. Keep the pupil's own choice for Week 2; use a labelled recovery model only if planning is missing, never as invented prior work.

Where this leads

Product designers turn a user's small problem into a clear brief. They compare ideas and explain why a design may work before a maker cuts material.
