OPENING RESILIENCE & CHANGE

Choose materials and plan a card stand

I can choose a material and safe join, plan the parts and steps, and check a card mock-up.

Weekly outcome

CONSTRUCTION: select materials and plan the build.

Keep the actual plan for Week 3.

ARRIVAL 5 MINUTES

Retrieve the design problem

One landscape paper card: 80 mm wide by 60 mm high.

Upright without a hand for 30 seconds on a clear level desk.

Today: materials, parts, safe plan and a card mock-up.

STARTER 3 MINUTES

Which property helps the job

Thin card often folds easily.

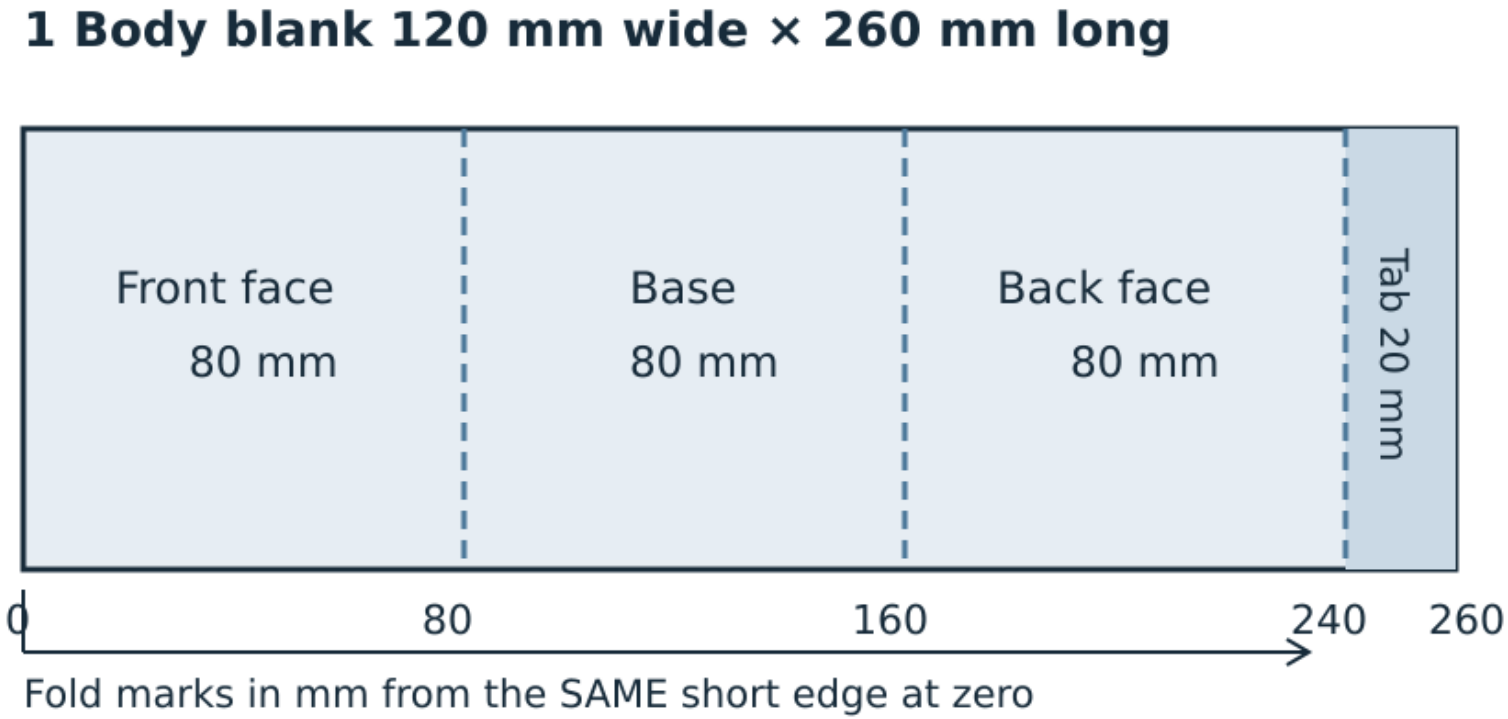

Corrugated board may be more stiff.

Use a real sample or name model information.

Hot glue is comparison only. No powered or heated tools.

I DO 5 MINUTES

The body blank and fold marks

U channel: 100 × 30 mm. Two long folds at 10 and 20 mm.

Model diagram, not to scale. Written ruler measurements govern.

WITHIN I DO PARTS AND SIZES

A cutting list for the model

Part	Quantity	Size
Main thin-card blank	1	120 mm × 260 mm
Retaining channel	1	100 mm × 30 mm
Landscape test card	1	80 mm × 60 mm

Written sizes govern. Diagrams are not templates.

WE DO 7 MINUTES

Choose material and cold join

Thin card for the mock-up: easy to fold.

Paper tape closes the inside tab and holds the U channel.

PVA needs adult label checks and full cure.

A wood choice needs a revised approved plan.

WE DO 2 5 MINUTES

Stop before cutting

80 mm was measured from one edge and 160 mm from the other.

A Cut now B Fix the marks C Guess

Which choice keeps the plan accurate?

INDEPENDENT 8 MINUTES

Plan and make a card mock-up

Record material and join with your reasons.

List sizes and write tools and safety beside each step.

Close the triangle with the 20 mm tab INSIDE.

U channel: back flange to face, shelf OUT, front stop UP.

WITHIN INDEPENDENT ONE ROUTE

Supported Standard or Stretch

Supported: use prepared parts; explain choices and record help.

Standard: plan the parts, tools and safety; make a mock-up.

Stretch: compare materials and cold joins; explain a trade-off.

A rehearsal is not a made mock-up.

REVIEW 4 MINUTES

Use the mock-up to improve

If ready, use the actual 80 mm by 60 mm card.

Clear level desk. No hand support. Count 30 seconds.

Stop if it tips or slips.

Record what happened and a change or next check.

WITHIN REVIEW TOOL AND RECORD CHECK

Keep safety and evidence clear

Suitable scissors only; never force thick board.

No knife scoring, powered tool or heated tool.

Adult checks any adhesive label and full cure.

No materials: choose and plan; mock-up and tests stay pending.

EXIT 3 MINUTES

Keep the plan for the build

I choose ___ because ___.

My first safe step is ___.

My mock-up showed ___ or is still pending.

My next change or check is ___.
