Staff answers and decision checks

Design and Technology LAUNCH Spring 2 Week 2 Thursday 4 March 2027 P1 Year A

Default dimensions and purpose

Body blank is 120 mm by 260 mm. Three 80 mm panels plus 20 mm tab make 260 mm. Fold marks80,160,240 all start at the same short edge. Channel is100 by 30 mm, long folds10 and20 from the same long edge. Test card is80 wide by60 high. Body base is120 by 80 mm; total table area target is160 by 120 mm including the projecting channel.

Material choice

Thin card is the default because approved scissors can cut it and fingers can fold it. Actual samples vary: trial first. Corrugated board may be stiffer but bulkier. Dowel and soft wood need a different approved design, prepared lengths or separately cleared manual tools and trained supervision. They are not part of the default cutting lesson.

Join choice

Paper tape is the taught cold join. PVA requires actual label and material approval plus full cure before a joined test. Hot glue is properties comparison only, not used. Never introduce a powered or heated tool for this block.

Hinge and parallel check

Hinge answer: fix the marks. Scissors down; remeasure from ruler zero at the same short edge. Parallel answer: no test before the actual adhesive full cure. Reteach the relevant control and ask a fresh explanation before independence.

Adult model reason

I choose thin card and paper tape. The card folds into a light triangle; tape holds the tab and U channel without heating. My actual mock-up still needs the card test. This is an adult example, not a pupil result.

Staff misconceptions and questions

Design and Technology LAUNCH Spring 2 Week 2 Thursday 4 March 2027 P1 Year A

The whole stand is only 80 mm deep

80 mm is the body base depth. The channel projects beyond it. Whole model target table area is160 mm wide by 120 mm deep. Actual work must be measured and tested; design values do not prove success.

Fold marks add up cumulatively

Each body mark80,160,240 mm is from the SAME short edge. Each channel fold10,20 mm is from the SAME long edge. Do not add a new160 mm after the 80 mm mark.

The channel is a loose flat strip

Form the shallow U with back flange at the lower front face, shelf out and front stop up toward the card. Use the side view and a real adult model. Keep the 20 mm body tab inside at the top seam, not under the base.

Cold call with a response choice

Foundation: What is the final body tab length? Expected 20 mm.

Middle: Why choose thin card for a mock-up? Expected it can fold and be cut with suitable approved scissors; test the actual sample.

Higher: Why can a mock-up result change the final plan? Expected it gives real information about folds, fit and stability, with its material limits recorded.

Evidence and support

A pupil-directed adult cut is supported participation and choice; it is not independent cutting. Mark a model not made, a test not done or an unfinished step honestly. Keep the actual trial to reuse, finish or refine next week.
