Teacher and cover plan

Design and Technology LAUNCH Spring 2 Week 3 Thursday 11 March 2027 P1 Year A

Make check and improve a card stand

Weekly outcome verbatim: CONSTRUCTION: make, adjust and improve.

LAUNCH Weekly Spring row 205. Year A. Resilience & Change. One 40 minute lesson for a small group aged 14 to 16.

Retrieve the actual Week 1 design and Week 2 plan. Demonstrate the approved hand tool cut and join, then support making with repeated checks. Keep each real adjustment and reason in the change log.

Prepare

Retrieve actual Week 1 designs and Week 2 material choices, cutting lists, step plans and card mock ups. Prepare suitable thin card, rulers, pencils, approved scissors, paper tape, a demonstration sample and one 80 mm by 60 mm paper test card. Try the actual scissors on a sample first. The card must cut and fold safely. Check the clear work area, stable seat, tool condition, support and access needs. Keep prepared pieces available. Reuse and refine an actual Week 2 mock up honestly where suitable. Never relabel it as a new independent build. Count issued tools and arrange safe storage for unfinished work.

A non specialist cover adult uses the approved card route with scissors only where competent and cleared to supervise. Otherwise use prepared pieces, pupil directed adult handling or a labelled simulation. No power tools. Do not introduce heated tools or wood cutting.

Timing

Stage	Minutes
Arrival	5
Starter	3
I do	5
We do	7
We do 2	5
Independent	8
Review	4
Exit	3

Total 40 minutes. Safety demonstrations checks tiers and safe pauses fit within these stages. Reserve time for tool return and honest unfinished evidence.

Retrieve the design and check the plan

Design and Technology LAUNCH Spring 2 Week 3 Thursday 11 March 2027 P1 Year A

Arrival 5 minutes

Say and do: Retrieve the actual records and mock up. Confirm the chosen purpose, sizes, material, joint, tool route and support. If records are missing, agree a new dated recovery plan and label it honestly. Do not invent prior work. Reuse or refine a real Week 2 mock up if suitable. Count tools before issue and check the actual card can be cut and folded safely.

Check and response: Ask what the stand must hold. Expect one actual 80 mm by 60 mm paper card upright on a level table, not a device or heavy load.

Starter 3 minutes

Say and do: Use the actual plan or supplied default. The body is 120 by 260 mm; folds at 80, 160 and 240 mm from the same short end. The channel is 100 by 30 mm; both long folds are at 10 and 20 mm from the same long edge. Diagrams are not full size cutting templates.

Check and response: Ask whether a single L fold makes the model channel. No: it needs a shallow U with back flange, shelf and upward front stop.

Demonstrate and rehearse the safe method

Design and Technology LAUNCH Spring 2 Week 3 Thursday 11 March 2027 P1 Year A

I do 5 minutes

Say and do: Demonstrate with suitable thin card and approved scissors. Show the stable position, helping hand clear, cut away from people, turn card and tools down before talking. Use fingers with a ruler guide for folds, not a scoring blade. Dry fit the triangle, tab inside at the top seam, then tape. Show both U folds and tape the back flange to the lower front slope. The shelf projects out and stop faces up. Model one stop and check, then invite the pupil to explain the next action before tools move.

Check and response: Ask pupil to point to a safe helping hand position, inside tab and upward front stop. If unsure, repeat on prepared parts before pupil tool use.

We do 7 minutes

Say and do: Guide the first mark and then fade prompts for the next if safe. Check all sizes and fold locations from the same zero edge. Adult clears cutting. Pupils cut using agreed support, or direct an adult. Trial the triangle and U before joining. Keep the demonstration card ready for physical orientation. Record the actual stage; do not rush all cutting into the slot if it is not safe.

Check and response: Check the marked line before each cut and trial fit before tape. A prepared piece is adult preparation, not pupil cutting evidence.

Check decisions and make the product

Design and Technology LAUNCH Spring 2 Week 3 Thursday 11 March 2027 P1 Year A

We do 2 5 minutes

Say and do: Use the hinge. 123 mm is outside the 118 to 122 mm improvement range. Tools down, remeasure from zero and agree a safe correction with the adult. Parallel check: one long fold at 10 mm does not form the default U channel. It needs folds at 10 and 20 mm from the same long edge. If either check is missed, return to the plan and repeat the trial on prepared parts before making continues. These checks guide improvement, not pupil grades.

Check and response: All pupils can point, speak, sign or direct the safe next action. Recheck understanding before a further cut or join.

Independent 8 minutes

Say and do: Maintain approved supervision: independent is a timetable stage, not unsupervised tools. Make or refine the actual stand from the approved plan. Clear each joint before testing. Test only one 80 by 60 mm card with hands away for 30 seconds on a level table. Remove it gently. No shaking, pushing, drops or extra load. If needed adjust one approved feature at a time and recheck. Record actual roles and results. For an adhesive alternative wait the full checked label time; testing remains pending if not ready.

Check and response: Observe safe actions, actual joint and checks. Ask what changed and why. Do not invent an adjustment; record real no change reasoning and a next step where appropriate.

Review adjustments and retain evidence

Design and Technology LAUNCH Spring 2 Week 3 Thursday 11 March 2027 P1 Year A

Review 4 minutes

Say and do: Collect and count tools before records are reviewed. Adult controls missing or damaged tools. Keep the area clear and do not search sharp offcuts with bare hands. Review the log for before, adjustment, reason linked to purpose, recheck result and support/date. Confirm any no change account from real checks. Store actual work and records together.

Check and response: A change entry needs an actual check and real reason. A proposed adjustment is labelled proposed; an unperformed recheck stays pending.

Exit 3 minutes

Say and do: Retain the actual item or model with dated design and plan references, pupil words, roles, checks, each real change and next step. Let the pupil correct scribed words. A materials free rehearsal stays simulation. Weekly evidence can support the unit award only when it matches actual observed actions and criteria.

Check and response: The record distinguishes pupil making, adult making, mock up, simulation and unfinished practical work. Do not confirm the unit award from this lesson alone.

Access support and alternatives

Design and Technology LAUNCH Spring 2 Week 3 Thursday 11 March 2027 P1 Year A

Cognition and Learning

Show one action at a time beside the actual plan. Model the first ruler check then fade that prompt. Use prepared pieces, a fold guide or repeated check words. Record the support and actual pupil role.

Communication and Interaction

Offer short instructions and thinking time. Accept speech, pointing, signing or pupil directed adult handling. Read any scribed comment back so the pupil can correct it.

SEMH

Use private feedback and choice of calm pause. A pause starts with tools down and work safe. Agree a short return cue. Discuss a difference in the work as information for a change, not a judgement about the pupil.

Sensory and Physical

Check handling and seating needs before issue. Offer approved adapted scissors, prepared pieces or pupil directed adult handling. Do not force dense card. A pupil can direct a safe adult action and have that role recorded.

Literacy and Numeracy

Keep millimetres as the working unit. Point to ruler zero and the same starting edge for each fold. Offer sentence starts and read the log back. Keep planned and actual numbers in separate fields.

EAL

Rehearse in any language. Pair the actual part with cut, fold, tab, shelf and front stop. Check understanding of same edge and tools down before making. Use confirmed scribing where needed.

Materials free fallback

With no card or safe equipment, use the supplied plan for a directed sketch or empty hand rehearsal. Say where you would cut, fold, join and stop to check. Log a proposed change as a proposal. Label the work planning or simulation. Actual cutting, joining, adjustment and testing evidence stay pending unless those actions take place.

Where this leads

Construction makers follow plans, choose safe methods and use checks to improve a product. A clear change log helps another person understand why the build changed.
