Sequence and evidence guide

Design and Technology LAUNCH Spring 2 Week 4 Thursday 18 March 2027 P1 Year A

Design and Technology LAUNCH Spring 2 Week 4. Use the dated cover plan, actual pupil work and book first. School and Public contain the same generic teaching resources.

Continue the design cycle

Earlier lessons created ideas, selected materials, planned and made or refined the stand. Today evaluates actual strength and finish, makes one useful safe improvement and rechecks. Keep any missing or unfinished earlier work honestly marked. Next week uses the actual design and evidence for the closing review.

The shared purpose

Invented client Sam needs one lightweight paper prompt card, 80 mm wide and 60 mm high, upright and readable on a level table. The whole stand, including its channel, should fit a 160 mm wide by 120 mm deep table area. It should hold the card for 30 seconds with hands away. The card should lift out by hand. Plan safe smooth edges and no loose sharp parts. These are invented design targets, not standards.

Evidence this week

Keep a real one-card baseline or explicit stopped/pending record, a finish check, an actual approved improvement with a reason and a fair one-card recheck. Record count, actual time, support, date and location. A model demonstration or rehearsal is not pupil practical testing.

Resources and routes

Select Supported, Standard or Stretch. Use the individual cards or combined pupil pack. Type instead starts closed; Save my responses creates a local text file. No record or photo is uploaded. Plan in any language.

Safe tests and honest limits

Design and Technology LAUNCH Spring 2 Week 4 Thursday 18 March 2027 P1 Year A

Intended load first

One lightweight paper card is the normal-use load. Adult clears the actual item and level table. Hands away for 30 seconds unless stopped earlier. Stop at slip, tilt, bowing, loose join, damage, concern or adult signal. No pushing, shaking, dropping, heavy object or testing to failure. The adult handles suspect parts.

Optional comparison

Optional Stretch comparison only: first pass the one-card baseline and ask the adult to clear the next stage. Use a second identical lightweight paper card, then a third, maximum three cards total. Each is 80 mm by 60 mm and made from the same lightweight paper; no added clips, lamination or weights. Observe for 30 seconds at each stage. Remove cards and inspect between stages. Stop at the first concern; never add another card after a stop. Keep card size and material, position, level table and timing the same. The purpose is still one card. This is a comparison, not a maximum load or safety claim.

A useful change

Use a real strength or finish finding. The adult approves the change and any hand-tool support. Recheck the same one-card conditions first. Keep all results and gaps honest. No defect is created for the log and no maximum capacity is certified.

No actual item or safe space

With no actual stand or safe test space, use the model brief and spoken checks. Point, speak or sign a strength check, a finish check and a proposed improvement with a reason. Rehearse the stop routine with empty hands. An adult may scribe exact confirmed words. Label this model evaluation or planning. Actual load testing, physical improvement and the recheck stay pending unless performed.

Where this leads

Product testers use a fair normal-use check and record limits. Makers use those findings to improve joins, handling and finish before the product is used.
