Presentation and evidence safety brief

Design and Technology LAUNCH Spring 2 Week 5 Thursday 25 March 2027 P1 Year A

This is a review lesson. No new cutting, joining or powered or heated tool is required. A safe, accessible explanation can use a drawing, a record or own words.

1 Today is costing, presentation and review. No cutting or new tool work is required. Keep tools returned and the work area clear.

2 The adult checks a real item before handling or showing it. Do not handle damaged or suspect edges. Use a drawing or actual record if the item is not safe or available.

3 Present privately to an adult or use an agreed accessible mode. No forced public display, peer audience, video or personal disclosure.

4 Any photo is object only with no people, names or identifying background. Do not upload work or private records through the lesson page.

5 A printed two-minute card is a plan. Record the real observed mode, duration and help; do not invent a presentation or earlier practical evidence.

If an item or record is missing

Tell the adult. Use only an actual available record or a labelled model. Keep practical gaps visible. Do not handle an unsafe item or recreate earlier evidence as though it happened before.

Materials free route

With no product, tools, paper, printer or device, hear the model prices. Use spoken sums and label your cost as an estimate. You may give a real private talk if an adult sees or hears it. Keep the actual mode, time and help. Use real work in your review, or name each gap. An adult can write your words and read them back. If no record can yet be made, the written record stays pending. Missing making, tests and actual product cost stay pending.

Type instead starts closed and exports a local text file. Keep private health records and personal details out of response boxes.
