Explain tectonic hazards

Tuesday 23 February 2027 | P2 | 40 minutes | Year A

Humanities | LAUNCH | Spring 2 Week 1 | HUM-LAUNCH-S2-W01

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

Route Supported | HUM-LAUNCH-S2-W01-E1

Learning outcome: Explain causes of tectonic hazards.

1 Use C1–C4 and D1–D3. An adult may read one card at a time. Point to apart, together and past.

2 Finish the earthquake chain: plate moves; fault locks; strain builds; fault slips; waves cause shaking. Finish the volcano chain at a subduction zone: plate sinks; water helps rock melt; magma rises; eruption.

3 Use C4. Name Japan and 11 March 2011. Explain how locking then slip caused this earthquake. Use because or so. Keep your own response.

Partner check

Analyst explains one cause chain. Checker points to the card and asks which step links movement to hazard. Swap roles. Each learner keeps an individual final answer. A partner does not answer for both.

Frames for reasoning

The plates move ____. The fault can ____. Strain ____. When it ____, energy ____, so ____. At a subduction zone water helps ____, so magma ____. In Japan on ____, ____ because ____.

My own finish

In your book, keep one earthquake cause chain, one volcano cause chain and a dated Japan explanation. Add card codes. You can use linked notes, a labelled diagram, a short paragraph or a private explanation with exact scribing. Plan in any language. Record actual help. A private pause is available.

Explain tectonic hazards

Tuesday 23 February 2027 | P2 | 40 minutes | Year A

Humanities | LAUNCH | Spring 2 Week 1 | HUM-LAUNCH-S2-W01

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

Route Independent | HUM-LAUNCH-S2-W01-E1

Learning outcome: Explain causes of tectonic hazards.

1 Use C1–C4 and the three diagrams. Label each boundary with movement and likely hazards.

2 Explain how an earthquake happens and how a volcano can form at a subduction boundary. Include the steps between plate motion and the hazard.

3 Explain Japan on 11 March 2011 using C4. Compare why a transform boundary can have earthquakes but usually no volcanoes.

Partner check

Analyst explains one cause chain. Checker points to the card and asks which step links movement to hazard. Swap roles. Each learner keeps an individual final answer. A partner does not answer for both.

Frames for reasoning

The plates move ____. The fault can ____. Strain ____. When it ____, energy ____, so ____. At a subduction zone water helps ____, so magma ____. In Japan on ____, ____ because ____.

My own finish

In your book, keep one earthquake cause chain, one volcano cause chain and a dated Japan explanation. Add card codes. You can use linked notes, a labelled diagram, a short paragraph or a private explanation with exact scribing. Plan in any language. Record actual help. A private pause is available.

Explain tectonic hazards

Tuesday 23 February 2027 | P2 | 40 minutes | Year A

Humanities | LAUNCH | Spring 2 Week 1 | HUM-LAUNCH-S2-W01

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

Route Aspire | HUM-LAUNCH-S2-W01-E1

Learning outcome: Explain causes of tectonic hazards.

1 Use C1–C5 and D1–D3. Explain earthquake causes at more than one type of boundary.

2 Explain volcano formation at a subduction and a divergent boundary. Compare the role of water and pressure.

3 Explain the dated Japan event. Test the claim “all tectonic hazards occur on plate boundaries”. Use a valid exception and state what a simple boundary diagram cannot show.

Partner check

Analyst explains one cause chain. Checker points to the card and asks which step links movement to hazard. Swap roles. Each learner keeps an individual final answer. A partner does not answer for both.

Frames for reasoning

The plates move ____. The fault can ____. Strain ____. When it ____, energy ____, so ____. At a subduction zone water helps ____, so magma ____. In Japan on ____, ____ because ____.

My own finish

In your book, keep one earthquake cause chain, one volcano cause chain and a dated Japan explanation. Add card codes. You can use linked notes, a labelled diagram, a short paragraph or a private explanation with exact scribing. Plan in any language. Record actual help. A private pause is available.
