Read and plot earthquake records

Tuesday 2 March 2027 | P2 | 40 minutes | Year A

Humanities | LAUNCH | Spring 2 Week 2 | HUM-LAUNCH-S2-W02

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

Route Supported | HUM-LAUNCH-S2-W02-E1

Learning outcome: Track live hazards online; interpret data.

1 Use C1 and D3. Point to each record's date, magnitude, depth and location. Name A as the newest of the three recent records.

2 Use D2 for A, then plot B at 14 S, 166 E and C at 8 N, 81 W on D1. Label each point. An adult may read the directions quietly.

3 Compare C's magnitude 7.7 with A's 6.5. Compare B's depth 10 km with A's 492 km. Finish: These fields alone cannot tell us which event caused most damage because ____.

Partner check

Analyst makes one claim using a record code and value. Evidence Checker finds the column, checks the unit and asks what is missing. Swap roles. Each learner keeps their own final plots and explanation. A partner does not answer for both.

Frames for reasoning

Record ____ has the largest magnitude, ____. Record ____ is shallowest at ____ km. The newest is ____ on ____. I plotted ____ north or south and ____ east or west. The table supports ____, but it cannot show ____ because ____.

My own finish

Keep your own A–C plots, the newest record with its date, a magnitude comparison, a depth comparison with km, and one valid limit. Label H as historic if you use it. In your book, keep your own response. Use linked notes, a labelled diagram, a short paragraph or a private explanation with exact scribing. Plan in any language. Record actual help. A private pause is available.

Read and plot earthquake records

Tuesday 2 March 2027 | P2 | 40 minutes | Year A

Humanities | LAUNCH | Spring 2 Week 2 | HUM-LAUNCH-S2-W02

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

Route Independent | HUM-LAUNCH-S2-W02-E1

Learning outcome: Track live hazards online; interpret data.

1 Use C1–C4. Plot and label A–C on D1 using the whole-degree locations. Identify the newest record with its date.

2 State the largest recent magnitude and shallowest recent depth. Support each claim with the record code, value and unit where needed.

3 Explain why largest magnitude does not prove most damage. Use C5 to keep H, the 2011 Japan record, separate from the recent snapshot.

Partner check

Analyst makes one claim using a record code and value. Evidence Checker finds the column, checks the unit and asks what is missing. Swap roles. Each learner keeps their own final plots and explanation. A partner does not answer for both.

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

Route Aspire | HUM-LAUNCH-S2-W02-E1

Learning outcome: Track live hazards online; interpret data.

1 Complete the same A–C plots and supported comparisons as the Independent route. Keep the frozen date and UTC standard explicit.

2 Calculate the difference between C and A magnitude values and between A and B depths. Keep units and avoid treating a magnitude gap as a simple energy multiplier.

3 Compare recent A–C with historic H. Explain why a small selected sample cannot prove a trend, show all impacts or predict the next earthquake.

Partner check

Analyst makes one claim using a record code and value. Evidence Checker finds the column, checks the unit and asks what is missing. Swap roles. Each learner keeps their own final plots and explanation. A partner does not answer for both.
