Explain effects and management in Japan

Tuesday 9 March 2027 | P2 | 40 minutes | Year A

Humanities | LAUNCH | Spring 2 Week 3 | HUM-LAUNCH-S2-W03

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

Route Supported | HUM-LAUNCH-S2-W03-E1

Learning outcome: Explain effects & management of a hazard.

1 Use C1, C2 and D1. Finish one chain from shaking to building damage and one from sea floor movement to tsunami flooding. Name Japan and 11 March 2011.

2 Choose one protection measure and one preparation measure from C3. Explain how each can reduce risk with because or so.

3 Use C4. Explain why early warning detects an event already under way. Add one reason why a sea wall or warning cannot remove all risk.

Partner check

Analyst gives one effect or management explanation. Evidence Checker points to the supporting card and asks how or what limit. Swap roles. Each learner keeps an individual final explanation. A partner does not answer for both.

Frames for reasoning

In Japan on 11 March 2011, ____ caused ____, a primary effect. Sea floor movement ____, so ____, a secondary effect. ____ is protection because ____. ____ is preparation because ____. Early warning detects ____, but it cannot ____.

My own finish

Keep your own primary and secondary effect chains, one protection and one preparation measure explained, and a correct warning or prediction limit. Use the same dated Japan case and source card codes. In your book, keep your own response. Use linked notes, a labelled diagram, a short paragraph or a private explanation with exact scribing. Plan in any language. Record actual help. A private pause is available.

Humanities | LAUNCH | Spring 2 Week 3 | HUM-LAUNCH-S2-W03

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

Route Independent | HUM-LAUNCH-S2-W03-E1

Learning outcome: Explain effects & management of a hazard.

1 Use C1–C4. Explain one primary and one secondary effect of the same Japan earthquake. Include the steps between cause and effect.

2 Explain one protection and one preparation measure. Link each to a risk in the case and state a limit.

3 Distinguish early warning from exact prediction. Explain why combined measures are more useful than relying on one measure alone.

Partner check

Analyst gives one effect or management explanation. Evidence Checker points to the supporting card and asks how or what limit. Swap roles. Each learner keeps an individual final explanation. A partner does not answer for both.

Frames for reasoning

In Japan on 11 March 2011, ____ caused ____, a primary effect. Sea floor movement ____, so ____, a secondary effect. ____ is protection because ____. ____ is preparation because ____. Early warning detects ____, but it cannot ____.

Humanities | LAUNCH | Spring 2 Week 3 | HUM-LAUNCH-S2-W03

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

Route Aspire | HUM-LAUNCH-S2-W03-E1

Learning outcome: Explain effects & management of a hazard.

1 Complete the same two effect chains and management explanation as the Independent route. Use source card codes.

2 Use C5 and D3 to evaluate the claim that early warning or a barrier removes all risk. Keep the timing of detection separate from the earthquake origin.

3 Choose a mixed service or transport effect. Explain why the evidence may support more than one process or time period. Make a justified judgement about combining measures.

Partner check

Analyst gives one effect or management explanation. Evidence Checker points to the supporting card and asks how or what limit. Swap roles. Each learner keeps an individual final explanation. A partner does not answer for both.
