Explain extreme weather risk

Tuesday 16 March 2027 | P2 | 40 minutes | Year A

Humanities | LAUNCH | Spring 2 Week 4 | HUM-LAUNCH-S2-W04

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

Route Supported | HUM-LAUNCH-S2-W04-E1

Learning outcome: Extreme-weather hazards & risk.

1 Use C1, C2 and D1. Name heavy rain and flooding as the hazard. Identify A's exposed homes or pump and one condition that makes harm more likely or more serious.

2 Use D3. A and B both have high flooding likelihood. Compare A's major potential severity with B's minor severity. Explain one exposure or capacity difference.

3 Choose one measure from C4. Explain how it can reduce risk and one limit. Keep the invented-data label and use because or so.

Partner check

Analyst gives one comparison using a card code. Evidence Checker names the factor or axis, checks the evidence and asks how or what limit. Swap roles. Each learner keeps an individual final explanation. A partner does not answer for both.

Frames for reasoning

The hazard is ____. Exposed in A are ____. One vulnerability is ____. A and B both have ____ likelihood, but their potential severity is ____ and ____. This differs because ____. The measure ____ could reduce risk by ____, but ____.

My own finish

Keep your own hazard, exposure and vulnerability examples; an A/B comparison using likelihood and potential severity; and one measure with a benefit and limit. Label the scenario as invented planning data. In your book, keep your own response. Use linked notes, a labelled diagram, a short paragraph or a private explanation with exact scribing. Plan in any language. Record actual help. A private pause is available.

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

Route Independent | HUM-LAUNCH-S2-W04-E1

Learning outcome: Extreme-weather hazards & risk.

1 Use C1–C4. Explain the hazard, exposure and one vulnerability in A. Identify a capacity in B. Do not blame people for conditions they may not control.

2 Compare A and B with both likelihood and potential severity. Support your judgement with the area cards rather than the rainfall alone.

3 Recommend one planning measure. Explain which factor it changes, its benefit and a limit. State why the guide is not an exact forecast or official warning.

Partner check

Analyst gives one comparison using a card code. Evidence Checker names the factor or axis, checks the evidence and asks how or what limit. Swap roles. Each learner keeps an individual final explanation. A partner does not answer for both.

Frames for reasoning

The hazard is ____. Exposed in A are ____. One vulnerability is ____. A and B both have ____ likelihood, but their potential severity is ____ and ____. This differs because ____. The measure ____ could reduce risk by ____, but ____.

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

Route Aspire | HUM-LAUNCH-S2-W04-E1

Learning outcome: Extreme-weather hazards & risk.

1 Complete the same A/B explanation and management link as the Independent route. Keep both axes and the invented assumptions explicit.

2 Add C. Explain why a smaller number of homes can still face major disruption when there is only one access bridge. Compare A/C without multiplying category labels.

3 Identify missing evidence and a trade-off between measures. Explain why risk cannot be known exactly and why vulnerability is not an individual fault.
